1.0 INTRODUCTION AND SCOPE OF SERVICES

This report presents the results of a Phase II Soil and Groundwater Quality Investigation performed by Northgate Environmental Management, Inc. (Northgate) for the City of Oakland at Assessor's Parcel Number (APN) 006-031-044 in Oakland, Alameda County, California (the Site). The Site consists of an approximate 2,375 square foot parcel identified on historic Sanborn Maps as 1014 Pine Street. The Site currently consists of a vacant lot located approximately 90 feet north of the intersection of Pine and 10th Streets. A Site Location Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

The purpose of the investigation has been to evaluate potential soil and groundwater quality concerns identified in a recent Phase I Environmental Site Assessment (ESA) prepared for the Site by Northgate (*Phase I Environmental Site Assessment, APN 006-031-044 (1014 Pine Street), Oakland, California*, dated May 3, 2010). The investigation was funded by USEPA Brownfields Grant # 2B-00T18101.

The scope of work for this investigation included the following services:

- Scanning the property with a metal detecting device to evaluate the Site for the possible presence of underground storage tanks (USTs) and buried debris;
- Collecting soil and/or groundwater samples from three soil borings advanced at the Site;
- Selectively analyzing soil and groundwater samples for 17 metals, total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), organochlorine pesticides, and semi-volatile organic compounds (SVOCs); and
- Preparing this report.

2.0 BACKGROUND

2.1 Site Description

The subject Site is currently a vacant, grass-covered lot enclosed on three sides by corrugated-metal or wooden fences. The Site was previously used as part of an automobile wrecking yard (Jenkins Auto Wreckers) that also covered several adjacent parcels. The auto wrecker was in operation from 1964 through 1994.

2.2 Previous Investigations

Information collected during the previous Phase I ESA for the Site prepared by Northgate indicated that the subject Site was developed with a residence from approximately 1902 through 1965, at which time the building was removed. The Site was subsequently utilized as part of the Jenkins Auto Wreckers yard. Jenkins Auto Wreckers, formally located at 1778 10th Street, also occupied five other adjacent parcels at the northeast corner of Pine and 10th Streets. The auto wrecker was in operation from 1964 through 1994. Vehicles and other materials were stored on the subject Site and the rest of the former Jenkins Auto Wreckers property through at least 1996 and beyond. Approximately 1,000 automobile tires were reportedly removed from the subject Site in 2001. Previous Department of Toxic Substances Control (DTSC) investigations of the Jenkins operation indicated that stained and oil-saturated surface soils were observed at the property during a DTSC inspection performed in 1996 in response to an anonymous complaint that waste oil and automobile batteries were being disposed of in a pit on one of the parcels. The DTSC determined that the allegations of improper disposal were unsubstantiated, but that improper storage of waste oil was occurring at the property. A previous soil and groundwater investigation at an adjacent parcel of the former Jenkins Auto Wrecking found petroleum hydrocarbons at concentrations ranging from 5.0 milligrams per kilogram (mg/kg) to 46,000 mg/kg; PCBs up to 260 micrograms per kilogram ($\mu\text{g}/\text{kg}$); chromium at 220 mg/kg; lead at 3,600 mg/kg; and zinc at 840 mg/kg. Soluble lead was measured in one soil sample at 350 milligrams per liter (mg/l). A groundwater sample collected at about 12 feet below the ground surface (bgs) contained benzene at 6.1 micrograms per liter ($\mu\text{g}/\text{l}$) and xylenes at 180 $\mu\text{g}/\text{l}$.

Based on the historical industrial land use and the contaminant levels observed at the property adjacent to the Site, Northgate concluded that there was a reasonable possibility that soil or groundwater contamination could be present on the Site. Northgate recommended soil and groundwater sampling to evaluate potential contamination concerns at the Site.

3.0 SOIL AND GROUNDWATER INVESTIGATION

3.1 Investigation Methods

3.1.1 Sampling and Analysis

Northgate performed soil and groundwater sampling at the subject Site on June 30, 2010. Field work included scanning the property with remote sensing equipment to evaluate the Site for the possible presence of USTs and buried debris. Following the scanning, two borings were advanced to depths of about 16 feet bgs for collecting soil and groundwater samples and one additional boring was advanced to approximately eight feet bgs for collecting soil samples. Approximate boring locations are shown on Figure 2. Four additional soil samples were collected from stockpiled fill soils located on the eastern half of the Site. Permits for the borings obtained from the Alameda County Public Works Department are presented in Appendix A.

The borings were advanced using a limited-access direct-push GeoProbe drill rig. During sampling, continuous cores of subsurface materials were collected in clear acetate liners. Upon removing the samples from the borehole, the acetate liner containing the soil core was opened at various intervals, and the soils were screened for indications of the possible presence of contamination using a photoionization detector (PID). Borings were logged in the field in accordance with the Unified Soils Classification System (USCS). Copies of the boring logs are attached in Appendix B.

Soil samples were collected for chemical analysis at approximate depths of 0.5 and 4.0 feet bgs from borings SB-1, SB-2, and SB-3. Sample intervals selected for chemical analysis were cut from the liners and sealed with Teflon tape and plastic caps. A duplicate soil sample was collected at 4.0 feet bgs at boring SB-3 by cutting the soil cone at 4.0 feet bgs and having the laboratory analyze the previously adjoining ends of the two core samples.

Groundwater samples were collected at borings SB-1 and SB-3 by lowering a perforated PVC casing into the borehole and collecting groundwater samples from the casing using disposable plastic bailers. A duplicate groundwater sample was collected at boring SB-3. Groundwater samples were placed in laboratory-supplied glassware.

Surface soil samples were manually collected from the top six inches of the stockpiled fill soil at four locations and placed in laboratory-supplied glassware using hand tools. All soil and groundwater samples were labeled and stored on ice in a cooler for transport to the laboratory under appropriate chain-of-custody control. The stockpiled fill soil samples were combined into

one composite sample by the laboratory prior to analysis. Samples were analyzed at Torrent Laboratories of Milpitas, California.

All soil samples were analyzed for the following constituents:

- Total petroleum hydrocarbons as gasoline (TPH-g), and for diesel (TPH-d) and oil (TPH-o) using EPA Methods 8260 and 8015, respectively;
- VOCs using EPA Method 8260;
- PCBs using EPA Method 8082; and
- 17 metals using EPA 6000/7000 series.

Soil samples collected at a depth of 0.5 feet bgs from the borings and the stockpiled fill soil samples were additionally analyzed for:

- organochlorine pesticides using EPA Method 8081; and
- SVOCs using EPA Method 8270.

Groundwater samples were analyzed for:

- TPH-d and TPH-o using EPA Method 8015; and
- TPH-g and VOCs using EPA Method 8260.

All drilling equipment was steam-cleaned or washed and rinsed prior to use at each boring location. After completion of sampling activities, all borings were backfilled with neat cement in accordance with the Alameda County Public Works Agency, Water Resources Section requirements. Soil cuttings generated during the drilling and sampling were stored on the Site in a sealed 55-gallon drum.

3.1.2 Data Evaluation

Chemical test results from soil and groundwater samples collected during this investigation were evaluated using Environmental Screening Levels (ESLs) established by the California Regional Water Quality Control Board (RWQCB) (*Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater*, Interim Final, November 2005, Revised May 2008) and the Total Threshold Limit Concentrations (TTLCS) established by the State of California (Title 22, California Code of Regulations).

The ESLs were developed to address environmental protection goals presented in the *Water Quality Control Plan for the San Francisco Bay Basin* (Basin Plan; RWQCB, 2006), including protection of groundwater and surface water resources, protection of human health, protection

against vapor intrusion into buildings, and other concerns. The ESLs are developed using a tiered approach to environmental risk assessment. For site characterization studies such as the present investigation, Tier 1 ESLs are used as a general screening guide to determine whether additional investigation, remedial actions, or risk assessment may be required. The Tier 1 ESLs are not regulatory cleanup standards, and the presence of a chemical at a concentration above the Tier 1 ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring, but rather, indicate that a potential for adverse risk may exist and that additional evaluation may be warranted. The Tier 1 ESLs are conservative, and are generally based on an assumption of future residential land use, and the potential use of groundwater as drinking water supply; assumptions that may not necessarily be applicable to a particular site. According to the Basin Plan, groundwater in the vicinity of the subject Site is classified as a potential drinking water supply. Other ESLs used in this report to assess environmental conditions at the Site are ESLs for evaluating soils in commercial or industrial land use as well as groundwater ESLs for evaluating potential vapor intrusion into buildings. Where ESLs were not established, the U.S. Environmental Protection Agency (U.S. EPA) Regional Screening Levels for tap water are provided. In addition, groundwater chemical test results were compared to the Maximum Contaminant Levels (the State Primary Drinking Water Standards, or MCLs) established under Title 22 of the California Code of Regulations. The TTLCs are used to define a waste material as a hazardous or non-hazardous waste for landfill disposal purposes, and do not necessarily have any relation to health risk evaluation.

3.2 Investigation Results

3.2.1 Scanning for USTs

Scanning the Site with remote sensing equipment (e.g., metal detecting devices) did not indicate the presence of underground utilities at the Site, or the potential presence of USTs or large areas of buried debris. However, a stockpile of vegetation debris and a large roll of chain-link fencing prevented the utility locator from scanning the ground in the far northeastern corner of the Site.

3.2.2 Subsurface Conditions

Subsurface soils encountered at the Site consisted primarily of poorly graded sand. Trace glass, brick, metal, and wood fragments were observed within the top one to two feet of soil in all three borings. Groundwater was encountered at depths of 7 to 8.5 feet bgs in borings SB-1 and SB-3.

3.2.3 Soil Quality

Soil sample analytical results are presented in Table 1, and laboratory analytical reports are presented in Appendix C. As shown in Table 1, TPH-g was not detected above the laboratory

method reporting limit (MRL) in any of the soil samples collected at the Site, with the exception of the sample collected at 0.5 feet bgs at boring SB-3, which contained TPH-g at 43 mg/kg. This sample was collected from the eastern portion of the Site, where various debris and stockpiled soils are present. This concentration of TPH-g (43 mg/kg) is below the RWQCB Tier 1 ESL of 83 mg/kg for TPH-g in shallow soil.

TPH-d was not detected above the laboratory MRL in any of the soil samples collected at the Site with the exception of 2.2 mg/kg TPH-d measured in sample SB-2-4.0 and 110 mg/kg TPH-d measured in sample SB-3-5.0. Only sample SB-2-0.5 exceeded the RWQCB Tier 1 ESL and the commercial/industrial land use ESL of 83 mg/kg. It should be noted that although TPH-d was not detected above the laboratory MRL in the stockpiled fill soil sample (SS-Comp1) the required sample dilution increased the MRL to 200 mg/kg, which is above the Tier 1 ESL value of 83 mg/kg.

TPH-o was detected above the laboratory MRL in all but one soil sample, with concentrations ranging from 4.6 mg/kg to 9,200 mg/kg. The highest concentrations of TPH-o were detected in sample SB-3-0.5 at 5,700 mg/kg and the composite fill-soil sample SS-Comp1 at 9,200 mg/kg. The measured concentrations of TPH-o in these two samples exceeded both the RWQCB Tier 1 ESL of 370 mg/kg and the commercial/industrial land use ESL of 2,500 mg/kg. None of the other measured concentrations of TPH-o exceeded the Tier 1 ESL.

VOCs were not detected above the laboratory MRLs in any of the soil samples collected at the Site, with the exception of the sample collected at 0.5 feet bgs from borings SB-3, which contained 46 micrograms per kilogram ($\mu\text{g}/\text{kg}$) of xylene. The measured concentration of xylene is below the RWQCB Tier 1 residential land use ESL of 2,300 $\mu\text{g}/\text{kg}$.

SVOCs were not detected above the laboratory MRLs in any samples except the stockpiled fill soil sample SS-Comp1 which contained bis(2-ethylhexyl)phthalate at 20 mg/kg. This result is below the laboratory MRL and therefore is an estimated result (J flagged). The measured concentration of phthalate does not exceed the respective ESLs for residential or commercial/industrial land use.

DDT was detected in all three shallow soil samples collected from the borings and the composite sample of the stockpiled fill, at concentrations ranging from 15 to 760 $\mu\text{g}/\text{kg}$. DDE was present in the sample collected from 0.5 feet at boring SB-2, at a concentration of 4.6 $\mu\text{g}/\text{kg}$. None of the measured concentrations exceed the respective Tier 1 ESLs of 1,700 $\mu\text{g}/\text{kg}$ for both DDT and DDE. It should be noted that, due to sample matrix interferences for samples SB-3-0.5 and SS-Comp1, the reporting limit for dieldrin was increased to 17 $\mu\text{g}/\text{kg}$ which exceeds both Tier 1 and

commercial/industrial land use ESLs for dieldrin of 2.3 µg/kg. No other organochlorine pesticides were detected above the laboratory MRLs. None of the measured concentrations of organochlorine pesticides exceed their respective ESLs or TTLCs.

PCBs were detected in two samples above the laboratory MRLs. Aroclor 1260 was reported at concentrations of 1.7 mg/kg in sample SB-3-0.5 and at 1.6 mg/kg in sample SS-Comp1. These concentrations exceed the Tier 1 ESL for PCBs of 0.22 mg/kg and the ESL for commercial or industrial land use of 0.75 mg/kg. Both samples were collected from the surface soils in the eastern portion of the Site where elevated levels of TPH-d, TPH-mo, and organochlorine pesticides were also observed. No other PCBs were detected above their respective laboratory MRLs. None of the measured concentrations of PCBs exceed the TTLC for PCBs of 50 mg/kg.

Metals, including antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc, were reported at low concentrations in nearly all soil samples collected at the Site. Most of the measured concentrations are well below the RWQCB Tier 1 ESLs, however some of the samples exceed regulatory screening standards as discussed below.

Cadmium was detected in two locations above the RWQCB Tier 1 ESL: in sample SB-3-0.5 (2.0 mg/kg) and sample SS-Comp1 (9.1 mg/kg). Sample SS-Comp1 also exceeds the ESL for commercial/industrial land use of 7.4 mg/kg. Copper was detected at a concentration of 270 mg/kg in sample SS-Comp1 which exceeded both the Tier 1 ESL and the commercial/industrial land use ESL of 230 mg/kg for copper. Mercury was detected above the laboratory MRL in three surface samples, at concentrations ranging from 0.12 mg/kg to 5.3 mg/kg. The highest mercury concentration, detected in sample SS-Comp1, exceeds the Tier 1 ESL for mercury of 1.3 mg/kg. None of the detected concentrations of Mercury exceeded the ESL for commercial or industrial land use.

Lead was measured at a concentration of 1,200 mg/kg in the stockpiled fill sample SS-Comp1. This concentration exceeds the RWQCB Tier1 ESL if 200mg/kg, the commercial/industrial land use ESL of 750 mg/kg, and the TTLC for lead of 1,000 mg/kg. The surface soil sample from boring SB-3 (sample SB-3-0.5) contained lead at 530 mg/kg, which exceeds the Tier 1 ESL. Zinc was also measured above the Tier 1 ESL but not the commercial/industrial land use ESL or the TTLC in the stockpiled fill soils sample SS-Comp1 1,100 mg/kg.

None of the remaining measured concentrations of metals exceeded the RWQCB Tier 1 ESLs except for arsenic which, reported at concentrations of 1.7 to 9.1 mg/kg, exceeds the Tier 1 ESL of 0.39 mg/kg and the ESL for commercial/industrial land use of 1.6 mg/kg. Vanadium, reported at concentrations of 19 to 28 mg/kg, exceeds the Tier 1 ESL of 16 mg/kg but not the ESL for

commercial/industrial land use of 200 mg/kg. It should be noted that most soils throughout the San Francisco Bay Area contain arsenic and vanadium at naturally occurring levels that are above the Tier 1 ESLs. In our opinion, the arsenic and vanadium measured in the samples are generally representative of naturally occurring background levels and do not represent a significant environmental concern. With the exception of lead measured in the stockpiled fill soil sample SS-Comp1, none of the measured concentrations of other metals exceed their respective ESLs for commercial/industrial land use or their respective TTLCs. However, it should be noted that the 530 mg/kg of lead measured in sample SB-3-0.5 could potentially contain soluble lead above hazardous waste classification criteria.

3.2.4 Groundwater Quality

Groundwater samples were collected from borings SB-1 and SB-3. Chemical test results are presented in Table 2, and laboratory analytical reports are presented in Appendix C.

As shown in Table 2, TPH-g and TPH-d were not detected above the laboratory MRLs in any of the samples analyzed. TPH-o was detected above the laboratory MRL in both groundwater samples. The sample from boring SB-1, located on the western part of the Site, contained TPH-o at 650 µg/l. Samples collected from boring SB -3, located on the eastern portion of the Site, contained TPH-o at 2,000 µg/l (primary sample) and 1,700 µg/l (duplicate sample). These results exceed the Tier 1 ESL of 100 µg/l for TPH-o.

VOCs were detected above laboratory MRLs in the primary and duplicate groundwater sample collected from boring SB-3. The primary sample contained 0.43 µg/l of xylene and 0.84 µg/l of 1,2,4-trimethylbenzene. The xylene result is below the laboratory MRL and therefore, an estimated result (J flagged). Both detected VOC concentrations are below the Tier 1 ESL of 1,750 µg/l for xylene and the U.S. EPA Regional Screening Level of 15 µg/l for 1,2,4-trimethylbenzene in tap water (an ESL has not been established). The duplicate sample collected from boring SB-3 contained 0.81 µg/l of 1,2,4-trimethylbenzene but did not contain xylenes above the MRL og 0.49 µg/l. The 1,2,4-trimethylbenzene result is below the laboratory reporting limit and, therefore, an estimated result (J flagged). This detection is also below the U.S. EPA Regional Screening Level for 1,2,4-trimethylbenzene. No other VOCs were detected above the laboratory MRLs. All VOCs detected in groundwater at the Site were below their respective Maximum Contaminant Levels (the State Primary Drinking Water Standards, or MCLs) established under Title 22 of the California Code of Regulations. All of the detected concentrations of VOCs are also well below their respective ESLs for evaluating potential vapor intrusion into buildings established by the RWQCB.

3.3 Quality Assurance/Quality Control

Groundwater samples were collected following sampling protocols and QA/QC procedures outlined in the *Sampling and Analysis Plan*, prepared by Northgate on June 23, 2010. Chain-of-custody forms were completed for all samples, and samples were preserved according to the analytical method requirements.

QC objectives include *precision*, a measure of mutual agreement among individual measurements of the same property; *accuracy*, the agreement of a measurement with the accepted reference value; *representativeness*, the degree to which sample distribution falls within the statistical bounds of a population; *completeness*, a measure of the amount of valid data obtained compared to what was planned; and *comparability*, the confidence with which one data set can be compared to another.

QC procedures are designed to increase or improve data quality and to help interpret discrepancies in results. Sampling QA/QC procedures were followed with respect to equipment, field procedures, sample containers, decontamination, storage, holding times, and field QC sampling. Torrent Laboratories in Milpitas, California, performed the analyses and are state-certified for the methods listed. All samples were preserved according to analytical method, all analyses were performed according to standard methods, and all sample holding times and preservation requirements were met.

Analytical results were reported for all values above the MDL. Several QA/QC analyses were performed by the analytical laboratory. Method blanks were analyzed for each analytical method performed to assess the level of contamination introduced by the laboratory. Results of the method blank analyses were all non-detect, with the exception of several metals that were reported at very low-level concentrations in the method blank sample. Surrogate recoveries were performed in which selected samples were spiked with a known concentration of contaminant (laboratory control spike [LCS] and laboratory control spike duplicate [LCSD]) and the percent recovery was calculated to assess the accuracy of the analytic method. Surrogate recoveries and the relative percent difference (RPD) between duplicate results—calculated to assess the precision of the data—were all within the acceptable range.

Northgate collected one duplicate groundwater sample from boring SB-3 during the investigation. Comparison of primary and duplicate sample results is used to assess the precision of the field data. No TPH-g or TPH-d were detected in either the primary or the duplicate sample. TPH-o was detected in the primary sample at 2,000 µg/l and at 1,700 µg/l in the duplicate sample, a relative percent difference (RPD) of 15 percent (%). 1,2,4-trimethylbenzene

was detected in the primary and duplicate samples at 0.84 µg/l and 0.81 µg/l, respectively, RPD of 4%. The detection of 1,2,4-trimethylbenzene in the duplicate sample was below the laboratory MRL and therefore, an estimated result (J flagged). Xylenes were detected at 0.43 µg/l in the primary sample and below the laboratory MRL of 0.49 µg/l in the duplicate sample. The detected concentration of xylenes in the primary sample was below the laboratory reporting limit and, therefore, an estimated result (J flagged).

Based on the information presented above, we conclude that the slight difference in analytic results for the primary and duplicate samples collected from SB-3 are within acceptable ranges. All groundwater test results are considered usable although J flagged results should be considered qualitative.

The duplicate soil sample collected at a depth of 4.0 feet bgs at boring SB-3 (samples SB-3-4.0 and SB-3-4.0D on Table 1) contained only TPH-o, with measured concentrations of 4.6 mg/kg in SB-3-4.0 and 9.7 mg/kg in SB-3-4.0D. The RPD is 111%. No other constituents were detected above the laboratory MRL. In our opinion, the high RPD is due to the natural heterogeneity in soil samples. The results should be considered acceptable.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The soil and groundwater sampling performed during this investigation indicates that elevated levels of petroleum hydrocarbons, metals, and PCBs are present in shallow soil and stockpiled fill soils located on the western third of the Site. Petroleum hydrocarbons as oil and low levels of VOCs are also present in groundwater beneath the Site, but at concentrations that do not represent a significant environmental concern.

Petroleum hydrocarbons as oil (TPH-o) were detected in shallow soil on the western end of the Site at 5,700 mg/kg, which exceeds regulatory screening levels for residential or commercial land use. TPH-o was measured in the small stockpiles of fill soil on the western end of the Site at 9,200 mg/kg. These soil samples also contain PCBs and lead above the regulatory screening levels for residential and/or commercial land use. The stockpiled fill soil contains lead above the Total Threshold Limit Concentration for classifying a waste material as a hazardous waste for landfill disposal purposes.

Groundwater samples collected from at the Site contained low to moderate levels of TPH-o, but did not contain TPH-g, TPH-d, or VOCs above regulatory thresholds, including drinking water standards (MCLs or RSLs) or ESLs for evaluating potential vapor intrusion into indoor air.

Based on the data collected during this investigation, we recommend that shallow soil (approximate upper 1.5 feet) of soil on the western third of the Site, and the small stockpiles of fill soil located on the western portion of the Site, be removed prior to redevelopment of the property. The data collected during this investigation indicate that following such soil removal, the property would be suitable for commercial or residential development, provided that shallow groundwater not be used as a drinking water source. Excavated soils are likely to require off-Site disposal as a hazardous or restricted waste.

5.0 LIMITATIONS

The purpose of a soil and groundwater quality investigation is to reasonably characterize existing Site conditions based on the results of a limited target subsurface investigation. In performing such a study, it is understood that a balance must be struck between a reasonable inquiry into the Site conditions and an exhaustive analysis of each conceivable environmental characteristic. The following paragraphs discuss the assumptions and parameters under which such an opinion is rendered.

No investigation is thorough enough to describe all environmental conditions of interest at a given Site. If conditions have not been identified during the study, such a finding should not therefore be construed as a guarantee of the absence of such conditions at the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

The presence of stockpiled debris materials, including a large roll of chain-link fencing, prevented the utility locator from scanning the ground in the northeastern corner of the Site and limited our ability to sample this portion of the property.

We are unable to report on or accurately predict events that may change the Site conditions after the described services are performed, whether occurring naturally or caused by external forces. We assume no responsibility for conditions we were not authorized to evaluate, or conditions not generally recognized as predictable when services were performed.

Environmental conditions may exist at the Site that cannot be identified solely by visual observation. Where subsurface exploratory work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

NOTES

mg/kg: milligrams per kilogram (parts per million)

µg/kg: micrograms per kilogram (parts per billion)

TPH: Total Petroleum Hydrocarbons

SVOC: Semi-Volatile Organic Compound

PCB: Polychlorinated Biphenyl

*: Reported value due to significant amount of heavy hydrocarbons within gasoline range (possibly fuel heavier than gasoline)

**: Not typical of gasoline/diesel standard pattern

<: Not detected at or above the indicated laboratory method reporting limit

ND: Not detected above the laboratory method reporting limit; limits vary by compound

--: Not tested

J: Indicates a value between the method MDL and PQL. The reported concentration should be considered as estimated rather than quantitative.

ne: Not established

na: Not applicable

ESL: Tier 1 - Environmental Screening Level for shallow soil = <10 feet deep in residential land use (RWQCB, 2008 Table A-1)

Commercial/Industrial - soil screening level for shallow soil = <10 feet deep in commercial/industrial land use (RWQCB, 2008 Table A-2)

TTLCS: Total Threshold Limit Concentration for defining a waste as a hazardous waste

Works Requesting Permits:

Borehole(s) for Investigation-Environmental/Monitorinig Study - 7 Boreholes

Driller: RSI - Lic #: 802334 - Method: other

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2010-0415	06/10/2010	09/21/2010	7	6.00 in.	16.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Applicant shall contact Ron Smalley for an inspection time at 510-670-5407 or email to ronaldws@acpwa.org at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.
6. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and

Alameda County Public Works Agency - Water Resources Well Permit

coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

7. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

RE: 1014 Pine St.Oakland CA

Work Order No.: 1006185

Dear Dennis Laduzinsky:

Torrent Laboratory, Inc. received 18 sample(s) on June 30, 2010 for the analyses presented in the following Report.

Samples SS4 -SS7 composited per CoC instructions. MS/MSD performed on all test methods per COC request.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink, appearing to read "Patti Sandrock".

Patti Sandrock

July 08, 2010

Date

Date: 7/8/2010

Client: Northgate Environmental Management Inc.

Project: 1014 Pine St.Oakland CA

Work Order: 1006185

CASE NARRATIVE

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Where water samples required dilution due to the presence of sediment in the submitted sample volume, results are reported to the MDL.

Analytical Comments for METHOD S_8270CFULL, 1006185-005A MS/MSD, Note: QC Analytical Batch ID 401135 Note: The % recoveries for 4-Chloro-3-methylphenol are outside of laboratory control limits (high bias) but are within % RPD limits. The associated LCS/LCSD % recoveries and % RPD are within limits. No corrective action required.

Note: The % recoveries for 2,4,6-Tribromophenol (Surrogate) are outside of laboratory control limits (high bias) in some samples. All compounds associated with this surrogate are ND (non detect) in all samples. No corrective action is required.

Analytical Comments for method S_6010BCAM17, 1006185-001A MS/MSD, QC Analytical Batch ID 401384, Note: The % recoveries for Lead in the MS and Silver in the MSD are outside of laboratory control limits but are within % RPD limits. The associated LCS/LCSD % recoveries and % RPD are within limits. No corrective action required.

Analytical Comments for method S_8081OCP, 1006185-001A MS/MSD, QC Analytical Batch ID 401404, Note: The % recovery for 4,4'-DDT in the MSD is outside of laboratory control limits but are within % RPD limits. The associated LCS/LCSD % recoveries and % RPD is within limits. No corrective action required.

SAMPLE RESULTS

Report prepared for: Dennis Laduzinsky
Northgate Environmental Management Inc. **Date Received:** 06/30/10
Date Reported: 07/08/10

Client Sample ID:	SB3-.5	Lab Sample ID:	1006185-008A
Project Name/Location:	1014 Pine St.Oakland CA	Sample Matrix:	Soil
Project Number:	1204.13		
Date/Time Sampled:	06/30/10 / 11:35		
Tag Number:	1014 PINE St. Oakland,CA		

Parameters:	Analysis Method	Prep Date	Date Analyzed	DF	MDL	PQL	Results	Lab Qualifier	Unit	Analytical Batch	Prep Batch
-------------	-----------------	-----------	---------------	----	-----	-----	---------	---------------	------	------------------	------------

The results shown below are reported using their MDL.

Chrysene	SW8270C	7/5/10	07/07/10	5	22.2	41.7	ND		mg/Kg	401435	0661
Bis(2-Ethylhexyl)phthalate	SW8270C	7/5/10	07/07/10	5	10.5	41.7	ND		mg/Kg	401435	0661
Di-n-octyl phthalate	SW8270C	7/5/10	07/07/10	5	17.4	41.7	ND		mg/Kg	401435	0661
Benzo[b]fluoranthene	SW8270C	7/5/10	07/07/10	5	16.7	41.7	ND		mg/Kg	401435	0661
Benzo[k]fluoranthene	SW8270C	7/5/10	07/07/10	5	21.4	41.7	ND		mg/Kg	401435	0661
Benzo[a]pyrene	SW8270C	7/5/10	07/07/10	5	17.0	41.7	ND		mg/Kg	401435	0661
Indeno[1,2,3-cd]pyrene	SW8270C	7/5/10	07/07/10	5	16.5	41.7	ND		mg/Kg	401435	0661
Dibenz[a,h]anthracene	SW8270C	7/5/10	07/07/10	5	19.1	41.7	ND		mg/Kg	401435	0661
Benzo[g,h,i]perylene	SW8270C	7/5/10	07/07/10	5	19.0	41.7	ND		mg/Kg	401435	0661
1,4-Dinitrobenzene	SW8270C	7/5/10	07/07/10	5	19.0	41.7	ND		mg/Kg	401435	0661
2,4,6-Tribromophenol (S)	SW8270C	7/5/10	07/07/10	5	16.5	114	0.000	S,D	%	401435	0661
2-Fluorobiphenyl (S)	SW8270C	7/5/10	07/07/10	5	24.1	85.6	0.000	S,D	%	401435	0661
2-Fluorophenol (S)	SW8270C	7/5/10	07/07/10	5	30.3	76.6	0.000	S,D	%	401435	0661
Nitrobenzene-d5 (S)	SW8270C	7/5/10	07/07/10	5	29.4	78.2	0.000	S,D	%	401435	0661
Phenol-d6 (S)	SW8270C	7/5/10	07/07/10	5	28.7	84.7	0.000	S,D	%	401435	0661
p-Terphenyl-d14 (S)	SW8270C	7/5/10	07/07/10	5	37.9	127	0.000	S,D	%	401435	0661

NOTE: D-Surrogate not recoverable due to necessary sample dilution (matrix interference) Results reported tot he MDL.

Parameters:	Analysis Method	Prep Date	Date Analyzed	DF	MDL	PQL	Results	Lab Qualifier	Unit	Analytical Batch	Prep Batch
TPH(Gasoline)	8260TPH	NA	07/07/10	100	1700	10000	43000	X	ug/Kg	401428	NA
(S) 4-Bromofluorobenzene	8260TPH	NA	07/07/10	100	57	127	77.8		%	401428	NA

NOTE: x-Reported TPH value due to significant amount of heavy hydrocarbons within range of C5-C12 quantified as gasoline (possibly fuel heavier than gasoline).

Parameters:	Analysis Method	Prep Date	Date Analyzed	DF	MDL	PQL	Results	Lab Qualifier	Unit	Analytical Batch	Prep Batch
TPH as Diesel	SW8015B(M)	7/6/10	07/07/10	50	38.0	99	110	X	mg/Kg	401420	0666
TPH as Motor Oil	SW8015B(M)	7/6/10	07/07/10	50	82.5	200	5700		mg/Kg	401420	0666
Pentacosane (S)	SW8015B(M)	7/6/10	07/07/10	50	59.7	129	0.000	S,D	mg/Kg	401420	0666

NOTE: x-Not typical of Diesel standard pattern. Diesel result is carry over from TPH as motor oil quantitation range. D - Surrogates not recoverable due to dilution of the sample.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit (PQL) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m3 , mg.m3 , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather than quantitative
NA - Not Analyzed
N/A - Not Applicable
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Northgate Environmental Management Inc.

Date and Time Received: 6/30/2010 17:27

Project Name: 1014 Pine St.Oakland CA

Received By: navin

Work Order No.: 1006185

Physically Logged By:

Checklist Completed By: lorna

Carrier Name: Gold Bullet Courier

Chain of Custody (COC) Information

Chain of custody present? Yes

Chain of custody signed when relinquished and received? Yes

Chain of custody agrees with sample labels? Yes

Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present

Shipping Container/Cooler In Good Condition? Yes

Samples in proper container/bottle? Yes

Samples containers intact? Yes

Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes

Container/Temp Blank temperature in compliance? Yes Temperature: 3 °C

Water-VOA vials have zero headspace? Yes

Water-pH acceptable upon receipt?

pH Checked by: pH Adjusted by:

CHAIN OF CUSTODY / ANALYSES REQUEST FORM

No. 001876

1 of 2

Project No.: # 1204.13		Project Location: 1019 Pine Street, Oakland, CA		Date: 6/30/10		Serial No.: # 1896						
Project Name: Wittigwill & Kazish Property		Field Logbook No.: See Daily Field Report Form		ANALYSES		Samplers:						
Sampler (Signature) <i>B. Mullolland</i>						<i>B. Mullolland</i>						
Samples						HOLD	RUSH					
Sample No.	Date	Time	Lab Sample No.	No. of Containers	Sample Type	VOCs (8260)	TPT (g/d, o) (8260 / 8015)	PCBs (8082)	MEtals (6000/9000)	Org. Pest. (8081)	VOCs (8290)	REMARKS
SB1-5	6/30/10	0940	-001A	1	Soil	X X X X X X						Std (5-day) TAT requested
SB1-1.0	6/30/10	0945	-002A	1	Soil	X X X X X						Report results to:
SB1-7.0	6/30/10	0950	-003A	1	Soil	X X X X X						Dennis.Ladunskiy@njem.com
SB1-CW	6/30/10	1055	-004A	5	Water	X X						
SB2-.5	6/30/10	1110	-005A	1	Soil	X X X X X X X						① - Please composite sample prior to analysis. Lab will coupon sample as indicated.
SB2-4.0	6/30/10	1115	-006A	1	Soil	X X X X X						② Extra volume provided for MS/MSD analysis.
SB2-6.0	6/30/10	1120	-007A	1	Soil	X X X X X						
SB3-.5	6/30/10	1135	-008A	1	Soil	X X X X X X X
