1.0 **SUMMARY**

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Northgate Environmental Management, Inc. (Northgate) at Assessor's Parcel Number (APN) 004-049-001 in Oakland, Alameda County, California (the Site). The Site consists of an approximate 2.76 acre parcel, a portion of which has historically been identified as 500 Kirkham Street. The Site currently consists of an asphalt-paved lot primarily utilized for parking, field offices, and construction contractor equipment and materials staging and storage areas. A Site Location Map is shown on Figure 1 and a Site Plan is shown on Figure 2. This Phase I ESA has been funded by the City of Oakland through the USEPA Brownfields assessment grant for West Oakland. The purpose of the Phase I is to assist the property owner in assessing environmental conditions at the Site.

Our review indicates that the Site was occupied by residences and commercial/industrial development from before the 1930s through the mid-1950s. These operations included a variety of other commercial/industrial warehouse and manufacturing operations including clothing, canned goods, paper products, and others. From the mid-1950s through the early 1990s, the entire Site, with the exception of the southwest quarter of the Site, was covered by the elevated Interstate 880 freeway. During this time, the southwest portion of the Site was occupied by automotive and truck repair businesses and a chemical repacking operation. The freeway was removed from the Site in the early 1990s, and the Site reverted back to commercial and industrial use.

500 Kirkham Street is listed as Smilo Chemical Company on the VCP, Envirostor, CERC-NFRAP, RCRA-SQG, and FINDS databases. The Site is also listed as J & A Truck Repair on the RCRA-SQG, FINDS, HIST CORTESE, LUST, Alameda County CS, and HAZNET databases. These listings are related to historic use, storage, and release of hazardous materials on the southwest portion of the Site. Available information indicates that 4,700 cubic yards of contaminated soil was excavated and removed from the southwest portion of the Site in the 1990s. Groundwater beneath this portion of the Site reportedly contains a variety of contaminants, including petroleum hydrocarbons and VOCs. The Site is currently listed as an open clean-up project undergoing site assessment on the Geotracker website maintained by the Regional Water Quality Control Board (RWQCB) as of December 30, 1995. The Department of Toxic Substance Control (DTSC) is listed as the lead agency for oversight. Within the Envirostor database, maintained by the DTSC, the Site status is listed as inactive and requiring evaluation as of September 3, 2010.

Our review did not indicate the presence of off-Site contamination sources that are known to have impacted the subject Site. However, the Site is located in an area of heavy industrial land use, and

we could not rule out the possibility that low-level groundwater contamination is present on a regional basis, including beneath the subject Site, related to these off-Site contamination sources.

In Northgate's professional opinion, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary practice in an effort to minimize liability. In summary, our review did not indicate the presence of Recognized Environmental Conditions associated with the Site, except for the following:

• The Site is listed on a number of State, Federal, and local regulatory agency databases related to the former occupancy of the southwest portion of the Site Smilo Chemical Company, a bulk chemical repackaging business, and J & A Truck Repair, a truck repair and maintenance facility. Previous environmental testing on this portion of the Site indicated that elevated levels of petroleum hydrocarbons as gasoline and motor oil, volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), and various heavy metals were present in shallow soil. Groundwater samples previously collected at the Site contained elevated levels of VOCs. Although it appears that the majority of contaminated soil was excavated and transported to an off-Site disposal facility, a formal report describing the remediation program could not be located. In addition, updated groundwater monitoring data is not readily available for review. The Site status is currently listed as inactive, requiring evaluation, on the Envirostor database maintained by the DTSC.

In addition, our review revealed the following issue of potential environmental concern:

• The Site is located in an area of historic industrial land use, and several sites with known soil and groundwater contamination are present in close proximity to the subject Site. We could not rule out the possibility that migration of contaminants from these off-Site sources may have impacted soil or groundwater quality beneath the Site.

We recommend that the soil and groundwater samples be collected and analyzed to evaluate current soil and groundwater quality conditions at the Site.

2.0 INTRODUCTION

This report presents the results of a Phase I ESA performed by Northgate at APN 004-049-001 in the City of Oakland, Alameda County, California. The Site is identified as 500 Kirkham Street. The Site consists of an approximate 2.76-acre parcel of land bounded by 7th Street on the north, 5th Street on the south, Union Street on the east, and Kirkham Street on the west. A Site Location Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

2.1 Purpose

The purpose of this investigation has been to identify and evaluate the presence of Recognized Environmental Conditions at the Site. The term "Recognized Environmental Conditions" means the presence, or likely presence of hazardous substances or petroleum products on the Site under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous materials or petroleum products into structures on the subject Site; or into the ground, groundwater, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with existing laws. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Northgate has endeavored to perform the ESA in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E-1527-05, Standard Practice for Environmental Site Assessments and the U.S. EPA All Appropriate Inquiry guidelines. It is understood that the City of Oakland intends to purchase and redevelop the Site.

2.2 Detailed Scope of Services

This Phase I ESA included the following services:

- Review of readily available information regarding the history of the subject Site, including historic aerial photographs, maps, previous reports, and other information, and discussions with individuals familiar with the subject Site, if available;
- Review of environmental lien documents obtained for the subject Site;
- Reconnaissance of the subject Site and near vicinity;
- Review of readily available regulatory agency publications and files, and discussions with regulatory officials, as applicable;
- Evaluation of Recognized Environmental Conditions, development of conclusions, and recommendations, as appropriate; and

• Preparation of this report.

2.3 Limitations and Exceptions

2.3.1 Limitations

The purpose of an environmental assessment is to reasonably evaluate the potential for, or actual impact of, past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the subject Site that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern of our client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Where the scope of services is limited to interview and/or review of readily available reports and literature, any conclusions and/or recommendations are necessarily based largely on information supplied by others, the accuracy or sufficiency of which may not be independently reviewed by Northgate.

Any opinions and/or recommendations presented apply to subject Site conditions existing at the time of performance of services. We are unable to report on, or accurately predict, generally unforeseeable events that may impact the subject Site following performance of services, whether occurring naturally or caused by external forces. Therefore, we cannot assume responsibility for such events or their impact. We also cannot assume responsibility for changes in environmental standards, practices, or regulations.

June 6, 2011

2.3.2 Exceptions

It should be noted that the time intervals between some historical information sources may exceed five years, due to the availability of such records. However, in our opinion, this does not significantly impact our ability to evaluate historic land use conditions at the Site.

Northgate was not able to contact a Caltrans representative to interview as the current property owner or obtain contact information for any former property owners for the Site. This constitutes a Data Gap as defined in the ASTM E1527 Standard which could potentially impact our ability to evaluate environmental conditions at the Site. There were no other limiting conditions.

2.4 User Reliance

This report has been funded by the City of Oakland through the USEPA Brownfields Assessment Grant for West Oakland. The purpose of the Phase I is to help the property owner in assessing environmental impacts and evaluating potential redevelopment options for the Site. Others may not rely on the information contained in this report without the express written consent of Northgate.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject Site is identified as APN 004-049-001 in Alameda County, California. The Site is also identified as 500 Kirkham Street in the City of Oakland.

3.2 Site and Vicinity General Characteristics

The Site is bordered by 7th Street on the north, 5th Street on the south, Union Street on the east, and Kirkham Street on the west. The subject Site consists of a 2.76-acre (500 feet by 250 feet) parcel of land encompassing a paved lot currently used for parking, construction field offices, and construction contractor equipment and materials storage. A large inclined roadway previously used for truck driver training is present on the northern portion of the Site.

The Site is located in an area of mixed residential and commercial/industrial development. Residential and commercial developments are present to the north and east of the Site. Parking lots and vacant land are present to the south and west of the Site. Interstate 880 is present further south of the Site.

3.3 Geology and Groundwater

According to Helley and Graymer (1997), the area of the subject Site is underlain by Merritt Sand, which consists of fine-grained, very well sorted, well-drained eolian deposits of Pleistocene and Holecene age. Subsurface materials encountered in borings previously advanced at the Site consist of artificial fill (gravelly sand/clay with brick, glass, and wood debris) to depths of up to 6 feet below the ground surface (bgs), followed by Bay Mud up to 8 feet bgs, and silty/clayey sand up to 13 feet bgs. These materials are in turn, underlain by the Temescal Formation consisting of silty clays with zones of shells and sands, and the Alameda Formation, a mixture of gravels, sands, silts, and clays with occasional shells and organic material, to a total depth of 160 feet bgs.

Groundwater has been previously encountered at a depth of approximately 7 feet bgs at the Site. Information contained in unpublished engineering reports for properties in the vicinity of the Site indicates that groundwater flow direction around the Site is predominantly to the southwest.

According to the U.S. Geologic Survey Topographic Map of the Oakland West Quadrangle, the subject Site is situated at an elevation of approximately 14 feet above sea level. On a regional basis, surface topography slopes down to the southwest. The nearest surface water is Oakland Inner Harbor, which is approximately ¾-mile to the south of the subject Site.

3.4 Current Use of the Property

The subject Site is currently a paved lot enclosed on all sides by a wire metal fence. The lot is subdivided among several tenants who primarily use the Site for field offices, parking, and a construction contractor equipment and materials storage yard. A large inclined roadway previously used for truck driver training is present on the northern portion of the Site. The southwestern portion of the Site was previously occupied by automotive businesses and a variety of commercial/industrial warehouse operations including clothing, canned goods, paper products, and Southern Pacific Railroad storage between early 1900s and the late 1990s. Smilo Chemical Company operated a chemical repackaging business on the southwest portion of the Site between 1954 and 1984. From 1984 to 1994 the southwest portion of the Site was occupied by J & A Truck Repair.

3.5 Description of Structures, Roads, Sewage, and Potable Water Sources

The Site is almost entirely paved with asphalt. A large inclined roadway previously used for truck driver training is located along the northern portion of the property. An elevated track for the Bay Area Rapid Transit system crosses the southern portion of the Site from east to west. A large modular office trailer is present on the western portion of the Site and a small trailer office is located in the central portion of the Site. The Site is served by East Bay Municipal Utility District water service and City of Oakland sewer service. Five well boxes for groundwater monitoring wells area present on the western portion of Site. However the Alameda County Public Works Agency could not locate any records related to these wells.

3.6 Current Uses of Adjoining Properties

A vacant building formerly occupied by an automotive parts store is located adjacent to the northeast corner of the Site. The subject Site is bordered on the north by 7th Street followed by residences and industrial properties. The Site is bordered on the east by Union Street, followed by commercial/industrial development. The Site is bordered along the south by 5th Street and on the west by Kirkham Street, followed by parking lots and vacant land. Interstate 880 is present further south of the Site.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Liens or Activity and Use Limitations

Northgate reviewed an environmental lien report for APN 004-049-001, provided by Environmental Data Resources (EDR), a regulatory database research firm. As indicated in the report, presented in Appendix A, no environmental liens or activity and use limitations of record were found.

4.2 Valuation Reduction for Environmental Issues

Northgate has not been informed of any known valuation reduction for environmental issues.

4.3 Owner, Property Manager, and Occupant Information

The subject Site is currently owned and managed by the State of California. The Site is currently used for construction staging yard for several contractors as well as for equipment and construction materials storage.

4.4 Specialized Knowledge

The City of Oakland does not have any specialized knowledge about the Site.

4.5 Reason for Performing the Phase I ESA

This Phase I ESA has been funded by the City of Oakland through the USEPA Brownfields Assessment Grant for West Oakland. The purpose of the Phase I is to assist the property owner in assessing environmental conditions at the Site and evaluating potential redevelopment options.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

To determine if the subject Site has documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the subject Site prescribed by the *All Appropriate Inquiry*, Northgate reviewed a summary of regulatory agency databases prepared by EDR. In addition, where appropriate, we reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of possible concern to the subject Site. The EDR report presenting a summary of the agency databases reviewed and a map showing the location of the identified sites, is provided as Appendix B. The results of the database search and follow-up agency file review are summarized below.

5.1.1 Subject Site

The subject Site is listed as Smilo Chemical Company on the VCP, Envirostor, CERC-NFRAP, RCRA-SQG, and FINDS databases, and is listed as J & A Truck Repair on the RCRA-SQG, FINDS, HIST CORTESE, LUST, Alameda County CS, and HAZNET databases. The listings are related to historical chemical use and storage at the Site and associated Site investigation and contamination clean-up activities, which are discussed in detail in Section 5.6 below.

5.1.2 Surrounding Area

<u>Federal NPL Site List (NPL, Proposed NPL)</u>: One site is listed on the NPL list within a 1-mile radius of the subject Site: **Amco Chemical**, located at 1414 Third Street, is approximately 0.2 miles west-southwest of the Site. This property was occupied by AMCO Chemical Corporation until December 1989. The site was listed on the National Priorities List on July 1, 2004 and the U.S. Environmental Protection Agency (EPA) has since conducted soil, soil gas, and groundwater investigations on the property. Groundwater flow beneath the site varies from southwest to south seasonally. The groundwater contamination plume has been well defined and is reportedly restricted to the area in the vicinity of the site. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its topographic location (down-gradient) in relation to the subject Site and the defined boundaries of the contaminant plume beneath the site.

<u>National Priority List Deletions (Delisted NPL)</u>: No sites are listed within a 1-mile radius of the subject Site.

<u>Federal CERCLIS List (CERCLIS, Federal Facility):</u> Four sites are listed within a 0.5-mile radius of the subject Site: **Amco Chemical**, located at 1414 Third Street, is approximately 0.2 miles

Removal Assessment. Safety Kleen Corp 7 178 01, located at 404 Market Street, is approximately 0.5 miles east-southeast of the Site. Residence Third Street, located at 1536 Third Street, is approximately 0.3 miles west of the Site. With the exception of Amco Chemical/West Oakland Lead Removal Assessment, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼-mile) and topographic location (down-gradient) in relation to the subject Site. The Amco Chemical site is discussed under the NPL listing above.

<u>CERCLA NFRAP List (CERC-NFRAP)</u>: Three sites are listed within a 0.5-mile radius of the subject Site: **California Soda Co.**, located at 355 Cypress Street, is approximately 0.2 miles west-southwest of the Site. **Nor Cal Metal Fabricators**, located at 1121 Third Street, is approximately 0.3 miles southeast of the Site. **Lot at 530-542 Lewis Street**, located at 530-542 Lewis Street, is approximately 0.4 miles west-northwest of the Site. These sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ½-mile) and/or topographic location (down-gradient) in relation to the subject Site.

RCRA Corrective Action Report (CORRACTS): Two sites are listed within a 1-mile radius of the subject Site. **Safety Kleen Corp 7 178 01**, located at 404 Market Street, is approximately 0.5 miles east-southeast of the Site. **Francis Plating of Oakland Inc**, located at 785 7th Street, is approximately 0.5 miles east of the Site. These sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than \(^{1}\)4-mile) and topographic location (down-gradient) in relation to the subject Site.

RCRA-permitted Treatment, Storage and Disposal Facilities (RCRA-TSDF): One site is listed within a 0.5-mile radius of the subject Site: **Safety Kleen Corp 7 178 01**, located at 404 Market Street, is approximately 0.5 miles east-southeast of the Site. This site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance (greater than ¼-mile) and topographic location (down-gradient) in relation to the subject Site.

Federal RCRA Generators List (RCRA-LQG, SQG, CESQG): Three sites are listed as large-quantity generators within a 0.25-mile radius of the subject Site: **Chevron No 206145**, located at 800 Center Street, is approximately 0.2 miles northwest of the Site. **Ashland Distribution Company**, located at 355 Mandela Parkway, is approximately 0.2 miles west-southwest of the Site. **Amtrak Oakland Maintenance Facility**, located at 1303 Third Street, is approximately 0.2 miles south of the Site. These sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their topographic location (down-gradient) in relation to the subject Site.

Six sites are listed as small-quantity generators within a 0.25-mile radius of the subject Site. With the exception of the sites discussed below, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given their topographic locations (down-gradient or cross-gradient) in relation to the subject Site and the lack of any documented contamination issues.

Caltrans, located at 1285 5th Street, is approximately 0.04 miles south-southwest of the Site. This property is cross-listed as Container Freight in the ENVIROSTOR database and is discussed under that listing below.

All Mercedes Dismantlers, located at 1225 7th Street, is approximately 0.06 miles east of the Site. This property is cross-listed in the LUST database and is discussed under that listing below.

SAF (USA) Corp Red Star, located at 1384 5th Street, is approximately 0.1 miles west of the Site. Based on our review, this listing appears to be associated with the Red Star Yeast facility also listed on the SLIC database at 1396 5th Street. This facility is discussed under the SLIC listing below.

<u>Federal Institutional / Engineering Controls Site List (US INST/ENG CONTROLS)</u>: No sites are listed within a 0.5-mile radius of the subject Site.

State and Tribal Equivalent NPL (RESPONSE): Eight sites are listed within a 1-mile radius of the subject Site. These properties not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼-mile) and/or topographic location (down-gradient or cross-gradient) in relation to the subject Site.

State and Tribal Equivalent CERCLIS (ENVIROSTOR): Fifty-one sites are listed within a 1-mile radius of the subject Site. With the exception of the sites discussed below, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given their distance (equal to or greater than ½ mile) and/or topographic locations (down-gradient or cross-gradient) in relation to the subject Site.

Amco Chemical, located at 1414 Third Street, is approximately 0.2 miles west-southwest of the Site. This site is discussed under the NPL listing above.

Palm Court, located at 902 Union Street, is approximately 0.2 miles northeast of the Site. Previous environmental investigations identified elevated levels of lead and chlordane in the surface soil at this property. In 2003 soils with lead and chlordane concentrations above site-specific clean-up goals were removed to depths of up to 4 feet below original ground surface. Following the completion of soil removal activities the site received No Further Action status on March 14, 2005 and has since been redeveloped into residential properties. Based on our review, this property does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

Container Freight, located at 1285 5th Street, is approximately 0.04 miles south-southwest of the Site. This site is also cross-listed as Caltrans under the same address in the RCRA-SQG database. This property was remediated as part of the Cypress Freeway (I-880) Reconstruction Project. Previous investigations reported elevated levels of petroleum hydrocarbons, VOCs, SVOCs, and heavy metals in soil and groundwater at the site. Approximately 15,000 tons of contaminated soil was removed from the site in 2006 and 2007. A Report of Completion of Remedial Action (DTSC, 2007) noted that semi-annual groundwater monitoring and cap inspection and

maintenance will continue at the site. However, groundwater monitoring reports were not readily available for review. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given its topographic location and the documented remediation work.

State and Tribal Landfill / Solid Waste Disposal Sites List (SWF/LF): No sites are listed within a 0.5-mile radius of the subject Site.

State and Tribal Leaking Storage Tank Sites (LUST/SLIC/HIST LUST/Indian LUST): Thirty-four sites are listed on the LUST database within a 0.5-mile radius of the subject Site. With the possible exception of the properties described below, none of the sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼ mile) and/or topographic location (down-gradient or cross-gradient) in relation to the subject Site. However, given the large number of LUST sites in the area, we could not rule out the possibility that groundwater contamination could be present on a regional scale in the area, including beneath the subject Site.

Container Freight, located at 1285 5th Street, is approximately 0.04 miles southwest of the Site. This property is discussed under the ENVIROSTOR listing above.

All Mercedes Dismantlers, located at 1225 7th Street, is approximately 0.06 miles east of the Site. A 10,000-gallon gasoline UST was removed from the site on October 22, 1992. Elevated levels of total petroleum hydrocarbons as gasoline (TPH-g), BTEX (benzene, toluene, ethylbenzene, xylenes), and lead were detected in samples collected in the tank pit. The pit was over-excavated and approximately 48.71 tons of contaminated soil was removed from the site. Confirmation soil samples did not contain any contaminant above their respective laboratory reporting limits. The site obtained regulatory closure on June 6, 1997. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

Everidge Service Company, located at 1211 7th Street, is approximately 0.06 miles east of the Site. This property was historically an automobile service station. Four USTs (250-gallon waste oil tank and three 4,000-gallon gasoline tanks) were removed from the site in October of 1992. During tank removal, TPH-g (up to 870 ppm), benzene (1 ppm), and lead (up to 95 ppm) were detected in stockpiled excavated soil. Additional soil samples collected from the UST excavation contained up to 2 ppm of benzene and 365 ppm of lead. A follow-up investigation performed on September 26, 1994 detected up to 7,000 ppm of TPH-g, 37 ppm of benzene, 250 ppm of toluene, 92 ppm of ethylbenzene, 440 ppm of xylenes, and 5.8 ppm of lead in soil samples collected in the vicinity of an on-site dispenser island. Soil contamination was primarily detected at depths of 11 to 12 feet bgs. Groundwater samples collected as part of this investigation contained up to 37,000 ppb of TPH-g, 7,100 ppb of benzene, 50 ppb of toluene, 270 ppb of ethylbenzene, and 470 ppb of xylenes. Free phase product was detected in one well down-gradient of the dispenser island. A USTCF 5-Year Review Summary, completed in 2010 by the State Water Resources Control Board (SWRCB), indicated that disposal of contaminated soil was undocumented and no remediation activities were reported (SWRCB, 2010a). The summary recommends legal enforcement action.

Given the lack of any documents defining the extent of the plume or remediation activities at this site, we could not rule out the possibility that releases from the Everidge site may have impacted soil and groundwater quality at the subject Site.

Trucker's Friend, located at 1395 7th Street, is approximately 0.1 miles west-northwest of the Site. A total of five USTs were removed from the site in the late 1990s. Soil and grab groundwater samples collected in 1996 from a UST excavation pit contained elevated levels of petroleum hydrocarbons, BTEX, and lead. According to the USTCF 5-Year Review Summary completed in 2010 by SWRCB, approximately 45 to 60 cubic yards of contaminated soil were over-excavated at that time (SWRCB, 2010b). In August 1997, an additional 800 cubic yards of petroleum hydrocarbon impacted soils were removed during another UST excavation at the property. Several violation notices have been issued for the property due to the unresponsiveness of the responsible party. The summary recommends legal enforcement action. Based on our review, we could not rule out the possibility that releases from the Trucker's Friend site may have impacted soil and groundwater quality at the subject Site.

Kelly's Truck Repair, located at 1390 7th Street, is approximately 0.1 miles west-northwest of the Site. A 1992 site investigation performed by Tetra Tech confirmed a 500-gallon gasoline UST, reportedly unused since the 1950s, was at that time present on site. Several borings were drilled in the vicinity of the UST and a grab groundwater sample was collected in a down-gradient location. Analytical results indicated elevated levels of petroleum hydrocarbons as gasoline and diesel, BTEX compounds (benzene, toluene, ethylbenzene, and xylenes), and naphthalene were present in soils up to 8 feet bgs. Analytical results of the grab groundwater sample indicated elevated concentrations of TPH-gas and TPH as diesel (TPH-d), BTEX, and naphthalene. On January 27, 1994 the on-site UST was removed and several holes were observed during removal. The tank pit was over-excavated and approximately 150 to 200 cubic yards of soil were aerated on site and reused as back fill. One groundwater monitoring well was installed approximately 10 feet south of the former UST location. Groundwater monitoring continued for four quarters and results indicated an overall decreasing trend in benzene concentrations. The site obtained regulatory closure on March 6, 1997. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

Caltrans Cypress Project, located at 5th Street and Adeline Street, is approximately 0.2 miles east-southeast of the Site. According to a Preliminary Status Report prepared by Jonas & Associates, Inc. (Jonas & Associates, Inc. 1995), three USTs were removed from the site in 1994. Elevated levels of TPH-d and TPH as motor oil (TPH-mo) were detected in soil at the site. Contaminated soil was over-excavated and the excavation pits were backfilled with off-site soil. Confirmation and backfill soil samples indicated that elevated levels of TPH-d and TPH-mo remained in the former excavation area. Elevated concentrations of lead were detected in soil used for backfill. According to the Geotracker profile, maintained for the site by RWQCB, site investigations conducted between 1996 and 2002 confirmed the presence of a dissolved contaminant plume. However, the offsite extent of the plume has not been adequately defined and

groundwater investigation reports were not readily available for review. Based on our review, we could not rule out the possibility that releases from the Caltrans Cypress Project site may have impacted soil and groundwater quality at the subject Site.

Seven sites are listed on the SLIC database within a 0.5-mile radius of the subject Site. With the exception of the **Red Star Yeast/1396 Fifth St** property (discussed below), none of the sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ½ mile) and/or topographic location (down-gradient or crossgradient) in relation to the subject Site.

Red Star Yeast/1396 Fifth St, located at 1396 5th Street, is approximately 0.1 miles west of the Site. Soil borings advanced at the site between 2004 and 2011 indicate that a layer of fill material, composed of dense sand with brick, concrete, gravel, and debris, is present at depths of approximately 2 to 4 feet bgs. Laboratory analysis of soil samples from this zone indicated elevated concentrations of cadmium, lead, mercury, and copper across the site. Shallow soil excavation is currently proposed as the remediation approach. In addition, a recent groundwater investigation performed by Citadel Environmental Services, Inc. (Citadel 2011) reported 2,400 micrograms per liter (μg/L) of oil-range hydrocarbons in one of five wells installed at the site. However, the groundwater contamination appears to be limited to the northwest corner of the site, approximately 250 feet from the subject Site. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site based on the defined extent of groundwater contamination at this site.

<u>State and Tribal Registered Storage Tanks (UST/AST/Indian UST/ FEMA UST)</u>: Two sites are listed on the UST database and two additional sites are listed on the AST database within a 0.25-mile radius of the subject Site. None of the listed sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their topographic location (downgradient or cross-gradient) in relation to the subject Site with the exception of **Trucker's Friend**, located at 1395 7th Street, which is discussed under the LUST listing above.

State and Tribal Voluntary Cleanup Sites (VCP/Indian VCP): Twelve sites are listed within a 0.5-mile radius of the subject Site. Based on our review, none of the sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼-mile) and topographic location (down-gradient or cross-gradient) in relation to the subject Site with the exception of **Palm Court**, located at 902 Union Street, and **Container Freight**, located at 1285 5th Street. Both properties are discussed under the ENVIROSTOR listing above.

<u>Local Brownfield Lists (US Brownfields)</u>: No sites are listed within a 0.5-mile radius of the subject Site.

Local Landfill / Solid Waste Disposal Lists (Debris Region 9, ODI, WMUDS/SWAT, SWERCY Indian ODI): One site is listed within a 0.5-mile radius of the subject Site: **National Recycling**Corp., located at 1312 Kirkham Street, is approximately 0.4 miles north of the Site. This property

does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance (greater than ¼-mile) in relation to the subject Site and the lack of any documented contamination issues.

Local Hazardous Waste / Contaminated Sites (Hist Cal-Sites, SCH, Toxic Pits): Six sites are listed on the Hist Cal-Sites database within a 1-mile radius of the subject Site. Based on our review, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼-mile) and topographic location (downgradient or cross-gradient) in relation to the subject Site except **Amco Chemical**, located at 1414 Third Street. This property is discussed under the NPL listing above.

Two listings are reported on the Toxic Pits database within a 1-mile radius of the subject Site: **SP**, **W.Oakland Yd** (**Oily Waste**) and **SP**, **W.Oakland Yard** (**Washwater**), both located at 1707 Wood Street, approximately 0.8 miles northwest of the subject Site. These properties do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ½-mile) and topographic location (down-gradient or crossgradient) in relation to the subject Site.

<u>Local Registered Storage Tank Lists (CA FID, HIST UST, SWEEPS UST)</u>: Nine sites are listed on the CA FID UST database within a 0.25-mile radius of the subject Site. Ten sites are listed on the HIST UST and SWEEPS UST databases. With the exception of the sites discussed below, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their topographic location (down-gradient or cross-gradient) in relation to the subject Site.

Willie Everidge, located at 1211 7th Street, is cross-listed as Everidge Service Company on the LUST database and is discussed under that listing above.

Kwong & Mark Inc DBA All Mercedes, located at 1225 7th Street, is cross-listed as All Mercedes Dismantlers on the LUST database and is discussed under that listing above.

AMMCO Chemical Corp., located at 1414 3rd Street, is cross-listed as Amco Chemical on the NPL database and is discussed under that listing above.

Universal Foods Corp. – **Oakland**, located at 1384 5th Street, is approximately 0.1 miles west of the Site. This site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given its topographic location (down-gradient or cross-gradient) in relation to the subject Site and the lack of any documented contamination issues.

<u>Local Land Records (LUCIS, DEED)</u>: One site is listed within a 0.5-mile radius of the subject Site: **Bobo's Junkyard**, located at 1401 Third Street, is approximately 0.2 miles west-southwest of the Site. This site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given its topographic location (down-gradient or cross-gradient) in relation to the subject Site.

Other Ascertainable Records Listed by EDR: The EDR report indicates the presence of one site on the Department of Defense (DOD) database within a 1-mile radius of the Site. **Alameda Naval Air Station** is located approximately 0.9 miles south of the Site. This property does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given its distance (greater than ¼-mile) and topographic location (down-gradient) in relation to the subject Site.

One site is listed on the Record of Decision (ROD) database within a 1-mile radius of the subject Site and on the Cortese database within a 0.5-mile radius of the Site: **AMCO Chemical**, located at 1414 Third Street, is approximately 0.618 miles south-southeast of the Site. This property is discussed under the NPL listing above.

One site is listed on the Bond Expenditure Plan (Ca Bond Exp. Pland) database within 0.5-miles of the Site: **Southern Pacific Transportation Co.**, located at 1707 Wood Street, is approximately 0.411 miles northeast of the Site. This site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance (greater than ¼-mile) and topographic location (cross-gradient) in relation to the subject Site.

Two sites are listed on the Hazardous Waste Transporters (HWT) database within 0.25 miles of the subject Site: **Ecologic Environmental Service** and **Waste Recovery Systems** are both located at 1351 5th Street. These properties do not appear to represent a significant potential threat to soil or groundwater quality at the Site, given their topographic location (down-gradient or cross-gradient) in relation to the Site and the lack of any documented releases.

Thirty-one sites are listed on the HIST CORTESE database within 0.5-miles of the Site. Our review indicates that most of these sites are also listed on the LUST database and are discussed under that section above. The two properties not listed under the LUST database (**Chrysler Auto Unloading**, located at 1401 Middle Harbor, and **Facility 10201-1**, located at 1121 3rd Street) do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their topographic location (down-gradient or cross-gradient) in relation to the subject Site.

Thirty-six sites are listed on the Alameda County Contaminated Sites (Alameda County CS) database within a 0.5-mile radius of the subject Site. Our review indicates that these sites also appear on the LUST or the ENVIROSTOR databases and pertinent properties are discussed under those sections above.

Two sites are listed on the EDR Proprietary Manufactured Gas Plants database within a 1-mile radius of the subject Site: **PG&E Oakland**, located at 50 Market Street, and **PG&E Plant Oakland**, located at First and Washington. These sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than \(^{1}\)4 mile) and topographic location (down-gradient or cross-gradient) in relation to the subject Site.

Eight sites are listed on the EDR Proprietary Historical Auto Stations database within 0.25 miles of the subject Site. Four of the properties are identified on the 1200 block of 7th Street, just north of

the subject Site. However, our review did not identify any documented contamination issues at these properties that are known to impact soil or groundwater quality at the subject Site with the exception of the following:

May John, located at 1225 7th Street, is cross-listed as Mercedes Auto Dismantlers on the LUST database and is discussed under the listing above.

Seven sites are listed on the EDR Proprietary Historical Cleaners database within 0.25 miles of the subject Site. Three of the properties are identified on the 1200 block of 7th Street, just north of the subject Site. However, our review did not identify any documented contamination issues at these properties that are known to impact soil or groundwater quality at the subject Site

5.2 Additional Environmental Record Sources

Northgate contacted local regulatory agencies for information regarding the use or storage of hazardous materials at the subject Site. Northgate reviewed files at any agency maintaining a file for the subject Site. The following agencies were contacted for information regarding the use or storage of hazardous materials at the Site:

- City of Oakland Community and Economic Development Agency (CEDA) Planning and Zoning Division, Building Services;
- City of Oakland Fire Department, Fire Prevention Bureau;
- East Bay Municipal Utility District; and
- Alameda County Department of Environmental Health.

5.2.1 City of Oakland Community and Economic Development Agency (CEDA) Building, Planning and Zoning Divisions

The Planning and Zoning Divisions have no records pertaining to the subject Site. The Building Department records consisted of numerous permit documents related to building demolition from 1968 and 1995 as well as plumbing and electrical permits for various on-site businesses. None of the reviewed records indicated use or storage of hazardous materials at the Site.

5.2.2 City of Oakland Fire Department, Fire Prevention Bureau

The Fire Prevention Bureau maintains files for the subject Site consisting of a site closure review, hazardous materials inspections, urban runoff inspections, and documents related to the removal of the on-Site USTs. Notes from a meeting held on December 4, 1984 between RWQCB, Alameda County Health Care Services Agency, and the State of California, Department of Health Services indicated that soil samples collected at the portion of the Site formerly occupied by Smilo Chemical Company contained elevated levels of pesticides and low

levels of heavy metals. However, none of the levels were elevated to the point of requiring cleanup.

Fire Department records also contained inspection records for J & A Truck Repair, dated between 1988 and 1994 that document improper storage and disposal of hazardous materials on the subject Site. Improper disposal of used oil filters, batteries, and waste oil, leaking drums, and large oil stains were documented in several inspection records. A 1992 anonymous complaint also noted that oil and grease was being disposed into the storm drain. A follow up inspection observed visible oil staining in the vicinity of the curb on Poplar Court, a street that historically intersected the Site from north to south.

The records also contained permit applications, dated August 30, 1995, for the removal of three 2,000-gallon gasoline USTs and to permanently obtain site closure. These documents identified Caltrans as the new Site operator. A July 1, 2008 permit application for a propane above ground storage tank (AST) was associated with the temporary use of the Site for a fire arts festival. Permit records noted that the AST was installed properly and there were no documented releases or spills from the tank.

5.2.3 East Bay Municipal Utility District (EBMUD)

An EBMUD technician stated that the subject Site is served by EBMUD sewer and water service.

5.2.4 Alameda County Department of Environmental Health – Local Oversight Program (LOP)

The LOP maintains numerous records pertaining to historical environmental investigations at the subject Site. Those reports are discussed in detail under section 5.6 below.

5.3 Radon

Information provided by EDR (Appendix B) indicates that indoor air samples collected at 49 sites in Alameda County by the U. S. Environmental Protection Agency (U.S. EPA) had an average radon concentration of 0.776 picocuries per liter (pCi/L) on the first floor level, -0.400 pCi/L on the second floor level, and 1.338 pCi/L at the basement level. None of the samples contained more than 4 pCi/L. According to EDR, Alameda County is designated as Federal Radon Zone 2 (indoor average less than 4 pCi/L but greater than or equal to 2 pCi/L).

The State of California Division of Drinking Water and Environmental Management maintains a database of radon test results indicating that out of 3 samples collected in the zip code 94607, no samples exceeded 4 pCi/L. The California Department of Health Services and the U. S. EPA

recommend that some form of mitigation be conducted for houses with indoor air radon concentrations of 4 pCi/L or greater.

5.4 Land Use History

Information on historical land use at the Site and adjacent area was evaluated by reviewing historic aerial photographs, maps, and other documents. A summary of our investigation findings is presented below.

5.4.1 Aerial Photographs

Northgate reviewed historic aerial photographs of the Site for the years 1930, 1939, 1946, 1953, 1958, 1965, 1969, 1975, 1976, 1982, 1989, 1993, 1998, 2005 obtained from EDR and Pacific Aerial Survey in Oakland. A summary of our aerial photograph review is presented below. Copies of select aerial photographs are provided in Appendix C.

Date: 1930		Scale: 1"= 791'

5.4.2 Sanborn Maps

Northgate reviewed Sanborn fire insurance maps for the Site obtained from EDR for the years 1902, 1912, 1951, 1952, 1957, 1958, 1961, 1967, and 1970. Copies of the Sanborn Maps are provided in Appendix D. Information from the Sanborn maps is summarized below.

1902	The Site comprises the city block bound by 7 th Street on the north, 5 th Street on the south, Union Street on the east, and Kirkham Street on the west. The Site is bisected by Poplar Street. The west half of the Site contains residences, a locksmith, and a coal yard. The east half of the Site contains residences, vacant lots, and a repair shop.
North:	7 th Street w/ RR tracks, then residences, a fire station, and a coal yard.
South:	5 th Street, but no map coverage beyond.
East:	Union Street, then residences and a laundry.
West:	Kirkham Street, then a brewery.

1912	The Site comprises the city block bound by 7 th Street on the north, 5 th Street on the south, Union Street on the east, and Kirkham Street on the west. The Site is bisected by Poplar Street. The west half of the Site contains residences, a door manufacturer, overall factory, a truck garage, and general storage warehouses. A RR spur track enters the western half of the Site from 5 th Street. The east half of the Site contains residences, vacant lots, and a steam laundry along 7 th Street.
North:	7 th Street w/ RR tracks, then residences and a laundry.
South:	5 th Street, followed by a railroad yard with the Commissary Dept of Southern Pacific Railroad, and Poplar Street.
East:	Union Street, then residences and a laundry located at 7 th and Union.
West:	Kirkham Street, then a brewery.

1951	The Site comprises the city block bound by 7 th Street on the north, 5 th Street on the south, Union Street on the east, and Kirkham Street on the west. The Site is bisected by Poplar Street. The west half of the Site contains residences, a church, overall factory, a truck garage, and general storage and SPRR warehouses. A RR spur track enters the western half of the Site from 5 th Street. The east half of the Site contains residences and a pipe yard.
North:	7 th Street w/ RR tracks, then plumbing and electrical supply, residences, and a machine shop for shock absorber refurbishing. A gasoline service station is located on the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street, followed by a railroad yard with the Commissary Dept of Southern Pacific Railroad and the "SPRR Junk Yard", and Poplar Street.
East:	Union Street, then residences. Auto service located at 7 th and Magnolia.
West:	Kirkham Street, then a brewery.

1952	The Site comprises the city block bound by 7 th Street on the north, 5 th Street on the south, Union Street on the east, and Kirkham Street on the west. The Site is bisected by Poplar Street. The west half of the Site contains residences, a church, overall factory, a truck garage, and general storage and SPRR warehouses. A RR spur track enters the western half of the Site from 5 th Street. The east half of the Site contains residences and a private garage and auto-freight depot at Union and 5 th .
North:	7 th Street w/ RR tracks, then plumbing and electrical supply, residences, and a machine shop for shock absorber refurbishing. A gasoline service station is located on the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street, followed by a railroad yard with the Commissary Dept of Southern Pacific Railroad and the "SPRR Junk Yard", and Poplar Street.
East:	Union Street, then residences. Auto service located at 7 th and Magnolia.
West:	Kirkham Street, then a brewery.

1957	The majority of the Site is covered diagonally from northwest to southeast by the Nimitz (Eastshore) Freeway. The freeway is likely elevated (?) as onramps and offramps are partially dashed on the map. The southwest corner of the parcel is occupied by a canned goods warehouse, a vacant warehouse, and a paper products warehouse. Poplar street enters the Site from the south off of 5 th . A rail spur extends on to the Site between Kirkham and Poplar.
North:	7 th Street, followed by a pipe and valve fitting warehouse, residences, and linen sorting. A gasoline service station is located on the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street followed by warehouses, a Southern Pacific delivery shed, and freight depots.
East:	Union Street beneath the Nimitz Freeway, followed by a steam laundry and gasoline service station.
West:	Kirkham Street followed by a brewery and a tin can warehouse.

1958	The majority of the Site is covered diagonally from northwest to southeast by the Nimitz (Eastshore) Freeway. The freeway is likely elevated (?) as onramps and offramps are partially dashed on the map. The southwest corner of the parcel is occupied by a paper products and flour warehouse for a brewery and other tenants. Poplar street enters the Site from the south of
	of 5 th . A rail spur extends on to the Site between Kirkham and Poplar.
North:	7 th Street, followed by a pipe and valve fitting warehouse, residences, and linen sorting. A gasoline service station is located on the southwest corner of 7 th and Union.
South:	5 th Street followed by warehouses, a Southern Pacific delivery shed, and freight depots.
East:	Union Street beneath the Nimitz Freeway, followed by a steam laundry and gasoline service station.
West:	Kirkham Street followed by a brewery and a tin can warehouse.

1961	The majority of the Site is covered diagonally from northwest to southeast by the Nimitz (Eastshore) Freeway. The freeway is likely elevated (?) as onramps and offramps are partially dashed on the map. The southwest corner of the parcel is occupied by a paper products company and warehouse. Poplar street enters the Site from the south off of 5 th . A truck repair operation is located just east of Poplar. A rail spur extends on to the Site between Kirkham and Poplar.
North:	7 th Street, followed by a pipe and valve fitting warehouse, residences, and restaurants. A gasoline service station is located on the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street followed by warehouses and a freight depot.
East:	Union Street beneath the Nimitz Freeway, followed by a steam laundry and gasoline service station.
West:	Kirkham Street followed by a brewery and a tin can warehouse.

1967	The majority of the Site is covered diagonally from northwest to southeast by the Nimitz (Eastshore) Freeway. The freeway is likely elevated (?) as onramps and offramps are partially dashed on the map. The southwest corner of the parcel is occupied by a soap works. Poplar street enters the Site from the south off of 5 th . A rail spur extends on to the Site between Kirkham and Poplar.
North:	7 th Street, followed by a pipe and valve factory and industrial equipment manufacturing. An auto parts machine shop occupies the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street followed by warehouses and industrial development.
East:	Union Street beneath the Nimitz Freeway, followed by a steam laundry and gasoline service station.
West:	Kirkham Street followed by vacant land, a food (molasses) manufacturing operation, and a gasoline service station.

1970	The majority of the Site is covered diagonally from northwest to southeast by the Nimitz (Eastshore) Freeway. The freeway is likely elevated (?) as onramps and offramps are partially dashed on the map. The southwest corner of the parcel is occupied by a soap works. Poplar street enters the Site from the south off of 5 th . A rail spur extends on to the Site between Kirkham and Poplar.
North:	7 th Street, followed by a pipe and valve factory and industrial equipment manufacturing. An auto parts machine shop occupies the southwest corner of 7 th and Union, immediately adjacent to the subject Site.
South:	5 th Street followed by warehouses and industrial development.
East:	Union Street beneath the Nimitz Freeway, followed by a steam laundry and gasoline service station.
West:	Kirkham Street followed by vacant land, a food (molasses) manufacturing operation, and a gasoline service station.

5.4.3 Topographic Maps

Northgate reviewed historic topographic maps for the Site obtained from EDR for the years 1895, 1915, 1948, 1949, 1959, 1968, 1973, and 1980. Copies of the topographic maps are provided in Appendix E. Information from the topographic maps is summarized below.

June 6, 2011

Quadrangle: San Francisco		Scale: 1:62500	Series: 15 Minute
1895:	No specific features are shown on the subject Site or adjoining properties. The Site is intersected from north to south by a road. A large rail yard is mapped to the south. A small inlet from the San Francisco Bay is present to the southeast.		
1915:	No specific features are shown on the subject Site or adjoining properties. Multiple lines appear to approach the Site from the large rail yard located further south.		
1948: (1:50000)	The subject Site and adjoining properties are shown as general urban land use, with no specific features depicted.		

Quadrangle: Oakland West		Scale: 1:24000	Series: 7.5 Minute
1949:	No specific features are shown on the subject Site or adjoining properties. The surrounding area, including the Site, is shown as general urban land use. One medium and two smaller structures are now mapped to the south of the Site. Numerous new structures are mapped in the vicinity of the rail yard, south of the Site.		
1959:	The Nimitz Freeway is now intersecting the Site from east to northwest. The roadway formerly intersecting the Site is no longer present. A rail line now extends from the southern rail yard onto the Site. One large structure is present to the south of the Site. Several small structures are now mapped further west and east.		
1968:	The Site is no longer mapped as urban land use. A rapid transit rail line intersects the southern portion of the Site from east to west. A small structure is mapped in the northwest corner of the Site. Several small and medium-sized structures are present in adjacent properties to the north, east, and west.		
1973:	The general vicinity of the subject Site appears the same as in the previous map. Several rail lines have been removed and replaced with a structure on a property southwest of the Site.		
1980:	The general vicinity of the subject Site appears the same as in the previous map.		

5.4.4 City Directories

A search of available city directories was performed by EDR at approximate five-year intervals from 1920 through 2006. A summary of the listings for the Site and nearby properties is shown in the table below. The complete city directory summary provided by EDR is presented as Appendix F.

Address	Date	Listing			
Site					
500 Kirkham Street	1967-1992	Auto engine and body repair services, "American AMBUVAN Service, Inc", chemical industries, box and packing production company			
Nearby Properties	Nearby Properties				
1044 50 th Street	1928	Residence			
1000-1099 5 th Street	1945-1975	Residences, "White Signal R", cabinet manufacturer, "Burns Distributing Co.", paint company			
1100-1199 5 th Street	1928-1943	Residences			
1200-1299 5 th Street	1928-1967	Residences, "Bigge Drayage Co.", "5 Express & Drayage Co.", auto repair services, transportation warehouse			
1300-1399 5 th Street	1928-2006	Residences, "Morrison Warehouse", "Alliance for West Oakland", freight services company, printing company, yeast manufacturing			
1400-1499 5 th Street	1928-2006	Residences, "Western Door and Sash Manufacturing and Warehouse", auto mechanics, "Cable Moore Inc.", glass and mirror manufacturing			
1200-1299 7 th Street	1928-2006	Residences, bank, pool hall, jewelry store, market, "The Crucible", "Pacific Paper Tube, Inc."			
1300-1399 7 th Street	1928-2006	Residences, piping supply company, fuel stations, "Homebricks", auto engine repair			
1400-1499 7 th Street	1928-2006	Residences, auto sales and wrecking, auto cleaners			
100-199 Cypress Avenue	1970-2002	Residences			
200-299 Cypress Avenue	1950-2002	Residences			
300-399 Cypress Avenue	1975-2002	Residences, "Cypress Salvage"			

Address	Date	Listing
100-199 Cypress Court	1950-2006	Residences, "Celestra Designs"
200-299 Cypress Court	1950-1955	Residences
300-399 Cypress Court	1950-1986	Residences
100-199 Cypress Street	1943-1962	Residences
200-299 Cypress Street	1928-1984	Residences
300-399 Cypress Street	1920-1991	Residences, trucking and freight services, "Bay Area Skeptics", "Bay Area Shippers Cooperative Association", "National Cylinder Gas Co. Pac Coast", beer and wine distributors, brewing company, housing assistance office, child care center, "Veeblefetzer Poot Co New & Used", "Jones Hamilton Co.", engineering firm, soda production company, "Jomac Chemicals", "Acme Products", "Hamway D S Co."
100-199 Cypress Way	1945-1955	Residences
200-299 Cypress Way	1945-1955	Residences
300-399 Cypress Way	1925-1975	Residences, beer and wine distributors, brewing company, county housing authority, "Stapel Truck Line", "Cypress Salvage", "Hamway D S Co.", soda company

500-599 Union Street	1925-1980	Residences, "Ferreira Jos F Soft Drinks", athletic club, freight and trucking services, linen and clothing services, "Transport International Pool"
600 Union Street	1991-1992	Auto body repair shop

June 6, 2011

5.5 Interviews

Northgate attempted to interview Mr. Chris Wilson of the Caltrans Environmental Division as a representative of the property owner, directed by the City of Oakland. However, Mr. Wilson did not respond to Northagate's request for an interview prior to the completion of this report. This constitutes a Data Gap as defined in the ASTM E1527 Standard.

5.6 Previous Reports

Numerous historic regulatory correspondence records and environmental investigation reports for the Site were obtained through the Alameda County Department of Environmental Health LOP website. Those records are discussed in detail below:

Abandoned Site Project Delisting of Mitigated Sites, Memorandum, State of California, Department of Health Services. November 26, 1984.

The Site, identified as Smilo Chemical Company, a chemical broker that utilized the Site for repackaging and storage of chemicals, is included in this memo. The memo notes that a worker complaint in March 1981 indicated that rinse water from truck decontamination activities was allowed to run onto the ground surface. A follow up investigation by the Department of Health Services confirmed improper storage of hazardous materials at the Site and discharges to the ground. Soil samples collected during this investigation reported the presence of heavy metals and pesticides. According to Smilo, contaminated soil was removed from the Site. However, the cleanup was undocumented. The Site summary concluded that it was necessary to verify the removal of contamination and document proper closure of the Site. However, the memorandum noted that a recent inspection of the subject Site indicated that the site had been mitigated and recommended that the Site be removed from the Abandoned Site Project list.

<u>Site Investigation Report – Area 8, Department of Transportation. Geo/Resource Consultants, Inc. August 28, 1992.</u>

According to this report, the subject Site has been on the CERCLIS list as Smilo Chemical but received a No Further Action status in 1984. Geo/Resource Consultants, Inc. drilled one boring, to a total depth of 3.5 feet bgs in the vicinity of the previous on-Site sampling where elevated levels of pesticides and heavy metals were detected. The soil encountered during drilling was believed to be fill material. Organochlorine pesticides were not detected above laboratory reporting limits in either soil sample collected from the Site. Metals were detected within background concentrations with the exception of lead, detected at 81 mg/kg in the 1-foot sample.

However, a waste extraction test (WET) result for lead (3.4 mg/L) was below the soluble threshold limit concentration (STLC) for lead of 5.0 mg/L. Based on these results, the report concluded that remedial action at the Site is not required.

<u>Fax Transmittal from Romena Jonas of Jonas & Associates, Inc. to Susan Hugo of Alameda.</u> <u>September 12, 1995.</u>

The fax transmittal from Jonas & Associates, Inc. included soil and water analytical results from an on-Site excavation related to the removal of historic USTs. The results indicated elevated levels of TPH-g (5,500 mg/kg, 32 mg/L), benzene (40 mg/kg, 5.6 mg/L), toluene (260 mg/kg, 5.1 mg/L), ethylbenzene (100 mg/kg, 0.063 mg/L), and xylenes (520 mg/kg, 5.5 mg/L) in soil and water from the excavation pit. The water also contained an elevated concentration of lead (0.11 mg/L). A sample collected from the soil stockpile contained elevated levels of total recoverable petroleum hydrocarbons (TRPH, 760 mg/kg). The physical extent of the excavation area was not described in this transmittal.

<u>Final Feasibility Study/Remediation Action Plan, Interstate 880, Cypress Replacement Project,</u> Oakland, California. California Department of Transportation. August 11, 1995.

The Final Feasibility Study performed by California Department of Transportation included numerous properties along the former Interstate 880 corridor, including J & A Truck Repair at 500 Kirkham Street. The document indicated that a Preliminary Endangerment Assessment (PEA) report was prepared by Environmental Solutions, Inc. in March of 1995 that revealed elevated levels of TPH, various heavy metals, and VOCs in soil and groundwater at the Site. The document recommended that contaminated soil be excavated and disposed off-site and that monitoring wells should be installed to evaluate groundwater contamination issues.

Remedial Design and Implementation Plan, Cypress Freeway Re-Alignment, Oakland, California. Jonas & Associates, Inc. September 12, 1995.

A summary of former environmental investigations within the Jonas & Associates report includes a record of wipe sampling that was performed on the interior walls of the on-site Smilo warehouse in October of 1994 by Environmental Solutions, Inc (ESI). In addition to the indoor sampling, ESI also collected soil and groundwater samples from 12 borings drilled across the Site. Results from the wipe samples showed detectable concentrations of total recoverable petroleum hydrocarbons (TRPH), metals, organochlorine pesticides, polychlorinated biphenyls (PCBs), SVOCs, and VOCs on the interior walls. Soil samples collected from borings drilled in the vicinity of the on-Site UST were found to be impacted by gasoline, oil and grease, lead,

acetone, BTEX and SVOCs. Elevated lead was observed in the vicinity of former sumps, adjacent to the former railroad spur, and in the vicinity of the UST. In addition, a WET test indicated soluble lead concentrations above the STLC in four of five soil samples analyzed. According to ESI's report, groundwater beneath the UST was impacted by gasoline, oil and grease, metals, and VOCs. Groundwater beneath the remaining portions of the Site was reported to be impacted by TPH, metals, VOCs, and unknown compounds in the diesel and motor oil range. The remedial plan proposed excavating contaminated soil to a maximum depth of 6 feet bgs in the southwest corner of the Site and removing approximately 4,000 cubic yards of contaminated soil to an off-Site disposal facility.

The Jonas & Associates, Inc. report indicated that one 1,100-gallon gasoline UST was known to be present on-Site. A second UST, a 2,000-gallon tank, allegedly containing gasoline, was discovered by Caltrans in 1994. A third tank was not mentioned in the report.

J&A Truck Repair Site, Oakland, California, Contract No. 53W202, Task Order No. 04-192203-01, Draft Monitoring Well Installation Workplan. Geocon Environmental Consultants, Inc. October 3, 1995.

According to Geocon's draft workplan, three groundwater monitoring wells were proposed in the vicinity of the former on-Site UST in order to assess groundwater quality and potential impacts from the historic UST. However, a report documenting well installations and any sampling records was not available.

Addendum to "Underground Storage Tank Closure Report, Cypress Freeway Re-Alignment, Former J & A Truck Repair, Oakland, California, November 27, 1995". Jonas & Associates, Inc. January 4, 1996.

This report notes that approximately 40 cubic yards of soil were excavated and disposed off-Site as part of approved remediation work. However, a copy of the 1995 closure report was not readily available.

Site Investigation Report, Task Order 04-192203-RJ, Contract Number 43A0012, Former J & A Truck Repair & Container Freight Sites, Oakland, California. Professional Service Industries, Inc. September 22, 2000.

The Site background portion of this report notes that between November 13 and 16, 1995 approximately 4,700 cubic yards of soil was excavated to an approximate depth of 6 feet bgs by MCM Construction, Inc. A total of 92 confirmation soil samples were reportedly collected from

June 6, 2011

the walls and bottom of the excavated area. Although 25 various chemicals were detected in these soil samples, a human health risk assessment performed on the results indicated that only PCBs were present above the Preliminary Remedial Goals (PRGs) established for this Site. It should be noted that a formal report describing the details of this remediation work is not available for review.

As part of the investigation performed by Professional Service Industries, Inc. (PSI), four monitoring wells were installed at the J & A Truck Repair property. Soil samples collected during well installation did not contain TPH as oil and grease, diesel, or gasoline. Elevated levels of VOCs, SVOCs, and metals were detected across the J & A property. However, the report noted that the detected concentrations of VOCs, SVOCs, and metals did not exceed the PRGs for industrial soils. Groundwater samples collected from the wells contained TPH-d, TPH-g, and a suite of VOCs. TPH-d and TPH-g were both detected at a well located on the southwest corner of the Site at concentrations of 0.8 mg/l and 0.77 mg/l, respectively. Several VOCs were detected in groundwater samples, with the highest concentrations appearing in a well located down-gradient of the former on-Site sumps. The measured concentrations of 1,1dichloroethane, 1,2-dichloroethane, 1,1-dichloroethene, naphthalene, tetrachloroethene, trichloroethene, and vinyl chloride exceeded their respective EPA Region 9 PRG levels for tap water or the drinking water maximum contaminant level (MCL). Two new VOCs, cis-1,2dichloroethene and trans-1,2-dichloroethene, were detected for the first time at the J & A property. The report recommended that groundwater monitoring continue at the subject Site on a quarterly basis. Additional groundwater monitoring reports are not available.

Based on our review, environmental investigations performed on the southwest portion of the subject Site have documented elevated concentrations of TPH, VOCs, and heavy metals in soil and groundwater beneath the Site. The majority of the contaminated shallow soil appears to have been excavated (to a depth of 6' bgs) in the southwest portion of the Site. However, a formal report documenting this cleanup action cannot be found. Groundwater contamination remains beneath the Site. No information is available regarding soil and groundwater quality across the remaining portions of the subject Site, previously occupied by the Interstate 880 elevated roadway.

6.0 SITE RECONNAISSANCE

Current Site conditions were observed during a reconnaissance of the Site and near vicinity performed by Northgate on April 29, 2011. Photographs from the reconnaissance are attached to the end of this report.

6.1 Methodology and Limiting Conditions

The Site reconnaissance was performed by traversing the Site by foot. Northgate was not escorted during the reconnaissance. There were no limiting conditions.

6.2 General Site and Vicinity Conditions

The subject Site is located at 500 Kirkham Street, between 5th and 7th Streets, in Oakland, Alameda County, California. The Site consists of a 2.76 acre parcel most of which is currently utilized as a construction equipment staging area for R & L Brosamer Inc. construction company (Photographs 1 – 4). Several emergency generators (Photograph 5) and heavy construction equipment (Photograph 6) were present on the Site at the time of our reconnaissance. Minor oil staining was observed on the pavement in several locations throughout the staging area (Photograph 6). Several drums containing waste oil, coolant, and other products were observed in the northwest corner of the property (Photograph 7). The drum storage area did not include secondary containment for the drums. A large equipment service truck with a 1,000-gallon diesel fuel tank was also parked along the northwest corner, immediately adjacent to a storage area for compressed gas cylinders (Photograph 8). Several medium and large stockpiles of soil, gravel, and recycled asphalt were present within the eastern half of the subject Site (Photograph 9).

Wifi Railway, a fiber optic contractor for the Bay Area Rapid Transit system currently leases a section of the central portion of the Site (Photograph 10). At the time of our reconnaissance, their area contained an office trailer and several large storage containers housing fiber optic equipment (Photograph 11). An elevated ramp, previously used for driver training, is located along the northern property boundary (Photograph 12). The ramp is currently utilized as additional storage space for construction supplies and various debris (Photograph 13).

The western half of the subject Site encompasses a large paved parking and construction staging area and office for PGH Wong Engineering, Inc. (Photographs 14 - 16). Five well boxes were observed on the western half of the subject Site (Photograph 16). Four of the wells are situated behind the engineering office and along the elevated BART track. A fifth well is located towards

the northwest corner of the Site, along Kirkham Street. Three drums believed to contain soil cuttings were observed near the wells along the southern Site boundary (see Photograph 16).

The subject Site is bordered on the north by 7th Street, followed by a residential development and several large warehouses (Photographs 18 and 19). An abandoned automotive parts store (noted in historic Sanborn Maps as a gasoline service station and machine shop) is located immediately northeast of the Site (Photograph 20). The Site is bordered on the east by Union Street, followed by an automotive repair facility (Photograph 21). The Site is bordered on the south by 5th Street, followed by an elevated track for BART and several on/off-ramps and elevated roadways for Highway 880 (Photograph 22). The Site is bordered on the west by Kirkham Street followed by a paved commuter parking lot (Photograph 23).

June 6, 2011

7.0 PHASE I ESA CONCLUSIONS AND RECOMMENDATIONS

The Phase I ESA was conducted to identify and evaluate the potential presence of Recognized Environmental Conditions within the Site and near vicinity that may affect on-Site soil and groundwater quality. The Site consists of an approximate 2.76 acre parcel identified as APN 004-049-001 in Oakland, Alameda County, California. A portion of the Site has historically been identified as 500 Kirkham Street.

Our review indicates that the Site was occupied by residences and industrial development from before the 1930s through the mid-1950s. These operations included commercial/industrial warehouse and manufacturing operations for clothing, canned goods, paper products and other industries. From the mid-1950s through the early 1990s, the entire Site, with the exception of the southwest quarter of the Site, was occupied by the elevated roadway for Interstate 880. During this time, the southwest portion of the Site was occupied by automotive and truck repair businesses and a chemical repacking operation. The freeway was removed from the Site in the early 1990, and the Site reverted back to commercial and industrial use.

500 Kirkham Street is listed as Smilo Chemical Company on the VCP, Envirostor, CERC-NFRAP, RCRA-SQG, and FINDS regulatory databases. The Site is also listed as J & A Truck Repair on the RCRA-SQG, FINDS, HIST CORTESE, LUST, Alameda County CS, and HAZNET databases. These listings are related to historic use, storage, and release of hazardous materials on the southwest portion of the Site. Approximately 4,700 cubic yards of contaminated soil was excavated and removed from the Site in the 1990s. Groundwater beneath the Site reportedly contains a variety of contaminants, including petroleum hydrocarbons and VOCs. The Site is currently listed as an open clean-up project undergoing site assessment on the Geotracker website maintained by the Regional Water Quality Control Board (RWQCB) as of December 30, 1995. The Department of Toxic Substance Control (DTSC) is listed as the lead agency for oversight. Within the Envirostor database, maintained by the DTSC, the Site status is listed as inactive and requiring evaluation as of September 3, 2010.

Our review did not indicate the presence of off-Site contamination sources that are known to have impacted the subject Site. However, the Site is located in an area of heavy industrial land use, and we could not rule out the possibility that low-level groundwater contamination is present on a regional basis, including beneath the subject Site, related to these off-Site contamination sources.

In Northgate's professional opinion, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary

practice in an effort to minimize liability. In summary, our review did not indicate the presence of Recognized Environmental Conditions associated with the Site, except for the following:

• The Site is listed on a number of State, Federal, and local regulatory agency databases related to the former occupancy of the southwest portion of the Site Smilo Chemical Company, a bulk chemical repackaging business, and J & A Truck Repair, a truck repair and maintenance facility. Previous environmental testing on this portion of the Site indicated that elevated levels of petroleum hydrocarbons as gasoline and motor oil, VOCs, SVOCs, and various heavy metals were present in shallow soil. Groundwater samples previously collected at the Site contained elevated levels of hydrocarbons and VOCs. Although it appears that the majority of contaminated soil was excavated and transported to an off-Site disposal facility, updated groundwater monitoring data was not readily available for review. The Site status is currently listed as inactive, requiring evaluation, on the Envirostor database maintained by the DTSC.

In addition, our review revealed the following issue of potential environmental concern:

• The Site is located in an area of historic industrial land use, and several sites with known soil and groundwater contamination are present in close proximity to the subject Site. We could not rule out the possibility that migration of contaminants from these off-Site sources may have impacted soil or groundwater quality beneath the Site.

We recommend that the soil and groundwater samples be collected and analyzed to evaluate potential soil and groundwater contamination concerns as part of the evaluation of potential redevelopment options.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Dennis Laduzinsky, C.E.G., R.E.A.

Principal

Qualifications of the Environmental Professional are provided as Appendix G.

SITE PHOTOGRAPHS

Photograph 1: View of the southern portion of the Site, currently used as a construction equipment staging area (view to the south).

Photograph 2: Additional construction staging areas on the northeast portion of the Site (view to the east).

Photograph 3: Typical equipment and vehicle storage area in the southeast corner of the Site (view to the southwest).

Photograph 4: Several storage containers line the southern property boundary along 5th Street (view to the west/southwest).

Photograph 5: Several emergency generators stored along the southern property boundary.

Photograph 6: Construction equipment present at the Site during site reconnaissance (several oil spots on the pavement are visible in the southwest corner of the image).

Photograph 7: Several drums potentially containing waste oil or coolant were present on the northeast corner of the Site (note lack of secondary containment).

Photograph 8: A construction equipment repair truck (containing a 1,000-gallon diesel tank) was present, adjacent to a compressed gas cylinder storage area, in the northeast corner of the Site.

Photograph 9: Several soil and gravel stockpiles present on the eastern half of the Site.

Photograph 10: View of the fenced-in area currently leased by Wifi Railway, a fiber optic contractor for the Bay Area Rapid Transit (BART) system.

Photograph 11: Typical interior of the Wifi Railway storage containers primarily holding fiber optic supplies and a small workshop space.

Photograph 12: An elevated ramp, formerly used for truck driver training, is present along the northern boundary of the Site.

Photograph 13: The elevated ramp is currently used for staging construction supplies and debris.

Photograph 14: The western half of the subject Site consists of an open lot occasionally used for construction staging and vehicle storage (note water truck parked on the right).

Photograph 15: View of the PGH Wong Engineering, Inc. office on the western half of the Site. Note the elevated BART track extending above the Site on the left.

Photograph 16: View of the vacant lot located south of the elevated BART track (southwest corner of the Site). View to the northeast.

Photograph 17: View of two of the five wells located on the western half of the Site. Note three drums likely containing soil cuttings in the background.

Photograph 18: The Site is bordered on the north by 7th Street, followed by a residential development on the northwest.

Photograph 19: The Site is bordered by 7th Street and several large warehouses to the northeast.

Photograph 20: An abandoned automotive parts store is located immediately northeast of the subject Site.

Photograph 21: The Site is bordered on the east by Union Street, followed by an automotive repair facility.

Photograph 22: The Site is bordered on the south by 5th Street as well as an elevated track for BART and multiple on/off-ramps and elevated roadways for Highway 880.

Photograph 23: The Site is bordered on the west by Kirkham Street, followed by a commuter parking lot.

APPENDIX A CHAIN OF TITLE AND ENVIRONMENTAL LIEN SEARCH REPORT

500 Kirkham Street

500 Kirkham Street Oakland, CA 94607

Inquiry Number: 2977192.7

February 17, 2011

The EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- · search for parcel information and/or legal description;
- · search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

does hereby release and quitclaim to the State of California all that real
property in the <u>City of Oakland</u> , County of <u>Atameda</u> , State of California,
described as.

Please see EXHIBIT "A" attached.

R/W Engineering Copy 8 1936 AUG

Exhibit "A"

(51357-A)

The land referred to herein is situated in the State of California, County of Alamada. City of Oakland, and is described as follows:

PARCEL 1A

Lots I to 8, inclusive, Lots 10 to 25, inclusive, and Lots 27 to 32, inclusive, in Block #91, as said lots and block are shown on the Map No. 2 of the Briggs Tract, Oakland, filed January 7, 1876. In Sock 2 of Maps, page 19, in the Office of the County Recorder of Alameda County.

EXCEPTING THEREFROM that portion thereof described as follows:

A portion of that parcel of land described in the deed dated September 30. 1946 and recorded October 26. 1945, in Book 5004 of Official Records, page 277, Alameda County Records, said portion being described as follows:

Commencing at the most easterly corner of the aforesaid parcel, said corner being also the point of intersection of the northarly line of Lot 27 in Slock 481, as said lot and block are shown on Map No. 2 of the Briggs Tract, Oakland, filed January 7, 1875, in Book 2 of Haps, page 19, in the Office of the County Recorder of Alameda County and the westerly line of Poplar Street; thence along said westerly line south 17 degrees 06' 32" west 112.77 feet; thence leaving last said line north 35 degrees 23' 10" west 185.23 feet to a line Lommon to the properties, now or formerly, of Goebal Brewing Compnay and of L. R. Josephus; thence along said common property line and its easterly prolongation south 72 degrees 53' 28" east 146.94 feet to the point of commencement.

ALSO EXCEPTING THEREFROM that portion which lies southerly of the northern line of the parcel of land granted to San Francisco Bay Area Rapid Transit District by deed dated March 13, 1968 recorded May 7, 1968, Resl 2x76, Image 967, Series No. 8A/49231, Official Records, described as follows:

Beginning at a point on the eastern line of Kirkham Street, distant thereon, northerly 68.52 feet from the intersection thereof with the northern line of 5th Street; thence along said line of Kirkham Street north 17 degrees 05' 54" east 40.74 feet; thence south 61 degrees 59' 10" east 218.39 feet thence south 62 degrees 06' 59" east 15.83 feet to a point of the western line of Poplar Street, distant thereon northerly 64.99 feet from the intersection thereof with the northern line of 5th Street; thence along said line of Poplar Street south 17 degrees 06' 29" west 40.77 feet; thence north 62 degrees 01' 05" west 0.40 feet; thence north 61 degrees 59' 10" west 233.77 feet to the point of beginning.

ALSO EXCEPTING that portion granted to the State of California by Deed recorded July 6, 1993, Series No. 93-239586 described as "Lots 1 through 9, inclusive, Map No. 2 of the Briggs Tract, filed January 7, 1997, Map Book 2, Page 19, Alameda County Records.

or following the many of the source of the second of the s

EXCEPTING THEREFRON that portion thereof lying Mortherly of the general Southerly line of the parcel of land conveyed to San Francisco Bay Area Rapid Transit District, by Daed recorded May 7, 1968, Rect 2175, Image 567, Gifficial Records.*

PARCEL 18

Portion of Lots 16, 17, and 18 in Block 491, as said lots and block are shown on the Map No. 2 of the Briggs Treet, Cakland, filed January 7, 1876 in Book 2 of Haps at page 19, in the Office of the County Recorder of Alameda County, described as follows:

Beginning at a point on the mestern line of Kirkness Street, distant thereon southerly 82.65 feet from the point of intersection thereof with the southern line of Saventh Street. Formerly Railroad Avenue, at 221d Streets are shown on 221d Majo; Funning thence along 321d line of Kirknes Street, southerly appendix A, page 4; 63.76 feet to the northern line of Lot 15, 25 shown on 321d map; thence along 321d northern line of Lot 15, easterly 83.00 feet; thence north 35 dagrees 23' 10" west 104.72 feet to the point of beginning.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/02/2010 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AMCO CHEMICAL	1414 THIRD STREET	WSW 1/8 - 1/4 (0.152 mi.)	0	16

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

AMCO CHEMICAL SAFETY KLEEN CORP 7 178 01	1414 THIRD STREET 404 MARKET ST	WSW 1/8 - 1/4 (0.152 mi.) ESE 1/4 - 1/2 (0.494 mi.)	0 AG122	16 205
Lower Elevation	Address	Direction / Distance	Map ID	Page

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

LOT AT 530-542 LEWIS STREET	530-542 LEWIS STREET	WNW 1/4 - 1/2 (0.378 mi.)	AB101	165

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAFETY KLEEN CORP 7 178 01	404 MARKET ST	ESE 1/4 - 1/2 (0.494 mi.)	AG122	205

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 11/08/2010 has revealed that there are 8 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/08/2010 has revealed that there are 51 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 12/14/2010 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 2 Manufactured Gas Plants sites within approximately 1 mile of the target property.

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 8 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 7 EDR Historical Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at Proposal April 30, 2003): The AMCO Chemical site AMCO) is part of a 0.83-acre property at 1414 Third Street in a mixed residential and light industrial area of Oakland, California. The property is bordered on the north by a vacant lot, on the west by residences, on the east by Nelson Mandela Parkway, and on the south by Third Street. A recently constructed elevated portion of the Interstate-880 I-880) freeway is located immediately across Third Street from the property. The property at 1401 Third Street) was historically occupied by Bobo s Junkyard. From the 1960s to 1989, the AMCO site was occupied by AMCO Chemical Company. AMCO operated a chemical distribution facility that included a warehouse, railroadspur, above-ground tanks, underground tanks, and drums used to transfer and store raw materials. In July 1988, the Oakland Fire Department observed leaking/rotting drums on the property. A subsequent emergency response investigation by AlamedaCounty and the U.S. Coast Guard revealed greater than 100 full and empty 5- and 55gallon weathered drums in an open area behind AMCO Chemical s main building. Stenciled labels on the drums indicated that the contents included acetone: 1,1,1-trichloroethane 1,1,1-TCA); methyl ethyl ketone; and dry-cleaning solvent. From 1989 to November 1998, DC Metals operated a scrap metal yard on the site. Cable Moore, Inc., currently uses the site for cable storage. Structures remaining on site include an office building, warehouse, and two small storage buildings. In June 1995, a construction crew noted odors at the intersection of Third Street and Nelson Mandela Parkway, while excavating a trench needed to relocate an underground electrical line in preparation for a freeway project. Subsequent subsurface investigation by California Department of Transportation Caltrans), DC Metals, and EPA revealed the presence of volatile organic compounds VOCs) including vinyl chloride in soil, soilgas, and shallow ground water at the AMCO site, beneath Third Street, and at the 1401 Third Street property former Bobo s Junkyard). On December 5, 1996, the EPA Emergency Response Office initiated a removal action at the AMCO site that involved the construction of a ground water and soil vapor extraction SVE) treatment system. The EPA treatment system collection trench was excavated from December 5 through December 20, 1996. By December 23, 1996, the trench had been lined with a silt curtain, filled with gravel, and covered with a tarp. Cement was poured to permanently cover the trench on January 8, 1997. The treatment system operated from January 1997 through July 1998 and extracted approximately 7,000 pounds of VOCs, approximately 40 pounds of which were vinyl chloride. Operation of the system ceased in July 1998, due to community concern over the potential for a release of dioxins from the thermal oxidation unit. On December 5 and 14, 1996, during construction of the treatment system collection trench, the EPA On-Scene Coordinator observed shimmering vapors emanating from the open trench. SUMMA tm) canister sampling indicated the presence of vinyl chloride; methylene chloride; 1,1,1-trichloroethane TCA); and trichloroethene TCE) in the immediate area of the trench. In addition, one SUMMA canister sample collected from in front of a residence adjacent to the site contained TCE. The EPA conducted several sampling events on and adjacentto the AMCO site between 1997 and 2000. VOCs continued to be detected in soil, soil gas, and ground water on site. In September 1999, SUMMA canister samples were collected from the crawl spaces of three residences located adiacent to the site. Vinyl chloride was detected in the three crawl spaces at 0.02 to 0.045 parts per billion by volume ppbv). There are 626 people living within a quarter of a mile of the source. There are also approximately

Background Info: The site was occupied by AMCO Chemical Corp. until December

1989. DTSC inspected the site on August 4, 1988. An order to Fence and Post the site was issued on August 8, 1988. On February 24, 1989 a Report of Violation was issued to correct violations related to leakage of hazardous waste from piping and containers; storage of hazardous waste in deteriorated or otherwise corroded conditions; and unlabeled waste containers. Soil and groundwater located outside of the site boundary were sampled by Caltrans and Southern Pacific Railroad. Elevated levels of VOC's (vinyl chloride,1,1-DCE,PCE,1,1,1-TCA, 1,2-DCE),

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility name: ASHLAND DISTRIBUTION COMPANY

Classification: Large Quantity Generator

Hazardous Waste Summary:

D002 Waste code:

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH. IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Background Info: Alexander's Ragtime Auto Wreckers operated an auto wrecking facility at the 0.3 acre Site from approximately 1966 to 1987.

Meyer Goldberg and Miriam Goldberg were owners of the Site during Alexander's Ragtime Auto Wrecker's operation at the Site. The Goldbergs sold the Site to the San Francisco Bay Area Rapid

Transit District (BART) in 1987. The Site is located in an industrial neighborhood with residences and other commercial areas located less than one block away. Business activities in the area include manufacturing, food processing, warehousing and offices. Residential areas are located to the north and west of

the the Site.

Comments Date: 04242000

Comments: Completed RA. Certified Site. RA consisted of field excavation

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

> CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code:

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS

NORMALLY UNSTABLE. REACTS VIOLENTLY WITH WATER. GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Classification: Large Quantity Generator

Description: Handler: generates 1,000 kg or more of hazardous waste during any

calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than

100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown Unknown Mixed waste (haz. and radioactive): Recycler of hazardous waste: Unknown Transporter of hazardous waste: Unknown Treater, storer or disposer of HW: No Underground injection activity: Unknown On-site burner exemption: Unknown Furnace exemption: Unknown Used oil fuel burner: Unknown Used oil processor: Unknown User oil refiner: Unknown

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil

Potential Contaminants of Concern: Diesel, Gasoline

Site History:

Between 1932 and 1973 the site was used as a service station. The number of generations of USTs that have been installed at the site is unknown. A number of USTs were removed in 1973 when the service station was decommissioned. In August 1989 bores B1 to B5 were installed and elevated concentrations were encountered. In 1995 three soil bores were installed, and in October wells MW-1 to MW-4 were installed. Nine additional soil bores were installed in March 1996, and in December offsite wells MW-5 to MW-7 were installed. In 1997 five soil vapor bores were installed. In 1999 u 2000 two more USTs were removed and a buried 55-gallon drum (as a waste oil UST) was removed. Hydraulic hoists were also removed at this time. In January 2002 well MW-8 was installed offsite. Twenty-three Geoprobe bores were installed in June 2002 to profile soil for upcoming over-excavation; elevated concentrations were encountered. In November 2002 approximately 1,584 tons of impacted soil was removed from the site and 900 pounds of ORC was placed in the excavation prior to backfilling with Class II aggregate base-rock. In January 2003 seven soil bores were installed and well MW-1 was replaced with MW-1A; elevated concentrations were detected. In October 2004 installed five CPT bores up to 70 feet bgs, and installed nine soil bores to 25 feet bgs. In preparation for potential additional over-excavation eight additional soil bores were installed in June 2006; ultimately the excavation did not proceed. In April 2007 wells MW-9 to MW-17 were installed to vertically delineate multiple water-bearing zones (and determine the direction of groundwater flow) beneath the site based on the results of the CPT bores installed in 2004. A Feasibility Study was submitted in November 2007, and modified in January 2008. Soil vapor was identified as a data gap in

EDR ID Number

the November 2007 FS; consequently in November 2007 six permanent vapor points were installed at the site. Due to sampling problems, the vapor points were resampled in October 2008. A low flow air sparging pilot test has recently been approved for the site. Groundwater monitoring has been conducted since October 1995 at the site.

or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: Groundwater monitoring wells were installed at the site in 1996 in

response to a fuel release. In March 1999, two 10,000-gallon diesel USTs, one 10,000-gallon gasoline UST, and one 8,000-gallon gasoline

UST were removed from the site. Interim remedial action was performed during the UST removal to address contaminated soil and ground water. Approximately 2,100 tons of contaminated soil were removed from the excavation. Approximately 33,000 gallons of contaminated water was pumped from the tank pit for off-site disposal. Approximately 1,700 tons of backfill was placed in the

excavation. Site investigations that included soil and

groundwater sampling were conducted at various times between 1999 and 2006. Ozone sparging has been ongoing since September 24, 2005.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

NOR CAL METAL FABRICATORS (Continued)

1000138493

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern:

Site History: A 10,000 fuel UST was removed on June 15, 1988. Agency

> correspondences also state that TPH-g and benzene concentrations in soil were detected. A groundwater monitoring well installed in 1988, located approximately 4 feet down-gradient of the former UST pit, also detected TPH-g and benzene in soil at concentrations. Soil samples were also collected during the pre-construction for the new Cypress replacement project. Groundwater sample analytical results

RB Case Number: NA

LOC Case Number: RO0002933

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: In August 1999 a subsurface investigation was completed in advance of

a potential property transaction, and significantly elevated levels of hydrocarbon contamination was detected in soil and groundwater beneath the site. However, no evidence of USTs were encountered during the investigation and there is no record of the removal of the USTs. Site characterization performed in 2007 and 2008 confirmed the presence of elevated levels of contamination. In November 2008 a DPE pilot test was completed and results from the pilot test indicate that DPE is feasible and readily implemented. Currently, DPE is proposed to remove contamination in soil and groundwater.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:

The former NestlT facility, originally constructed by American Creamery in 1915, was used to manufacture ice cream and packaged milk. Carnation purchased the property in 1929 and made additions and improvements between 1946 and 1973 for dairy product processing and distribution. NestIT USA, Inc. assumed operation of the property following its purchase of Carnation in 1985. NestlT ceased operations at the property in 1992. While it was operational, the facility was used for the distribution of ice cream and packaged fresh milk by trucks. The delivery trucks were fueled at dispensers near service bays located at the northwest corner and were repaired and maintained at the facility. A chronological summary of historical operations at the facility and remedial actions and at the Site is provided below. Following development by Carnation, facilities included food processing equipment, large cooler/freezer rooms, and five (5) underground storage tanks (USTs; two (2) gasoline, two (2) diesel, one (1) waste oil) for delivery vehicles. 1980s o Ice cream manufacturing and distribution activities declined in the late 1980s. o In early 1988, ice cream and milk distribution ceased. o In December 1988 and January 1989, five USTs were excavated and removed from the Site. o Free product was observed in the tank excavation area during UST removal. o Approximately 1,200 cubic yards of soil removed during UST excavation, treated on-site, and replaced in excavation. 1990s o Additional remediation efforts were implemented in the early 1990s. o A soil vapor extraction (SVE) system operated in the former UST area from January 1994 through 1995, removing approximately 34,000 pounds of hydrocarbons. o A multi-phase extraction system operated from August 1997 through June 2000, removing 10,875 pounds of hydrocarbons, o Active remediation terminated in November 1999, with the concurrence of ACHA and the Regional Water Quality Control Board, San Francisco (RWQCB-SF), in response to reductions in LPH

measurements. o NestlT monitored a network of 11 monitoring wells for petroleum hydrocarbons and halogenated volatile organic compounds (HVOCs) in groundwater semi-annually for two years. 2000s o Operation of the multi-phase extraction system terminated in June 2000. o A Risk Management Plan (RMP) and deed restriction were recorded. o NestlT sold the Site to Encinal 14th Street, LLC in July 2000. o NestlT submitted a Comprehensive Site Characterization Report to ACHA in January 2001 in support of its request for Site closure. o NestlT submitted a Request for Case Closure to ACHA in February 2002. o All unused wells were properly abandoned in December 2002. o NestlT submitted Site closure request follow-up letters to the ACHA on June 12, 2006 and June 15, 2007. o In response to ACHS?s September 28, 2007 directive, NestlT performed and submitted results of additional field sampling in March and July 2008.

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: The former Shell-branded service station is located at the northeast

corner of the 14th Street and Union Street intersection in Oakland, California (Figure 1). Currently, an abandoned one-story station building and a pump island canopy occupy the site, and much of the property is unpaved. Land use in the surrounding area is currently

residential to the north, south, and east, and is

commercial/industrial to the west and southwest. The site topography is essentially flat. Previous environmental work has included significant site assessment, a sensitive receptor evaluation/well survey, risk evaluation, two rounds of feasibility testing (in 2000

and 2006), several rounds of interim remedial action, and implementation of a prior CAP. Quarterly groundwater monitoring activities have been performed at the site since 1996. A summary of previous environmental work conducted at the site between 1991 and 2006 and prior boring/well location maps is included in Pangea?s Draft Corrective Action Plan and Pilot Test Work Plan (Draft CAP/WP) dated January 18, 2008. On November 29, 2007, ACEH requested a

The Safety-Kleen Oakland facility includes a 8,900 square foot office and warehouse building within a commercial and industrial area of Oakland, CA. The site is currently used for storage of waste materials in the warehouse prior to transfer of the wastes to other facilities for processing. Safety-Kleen began operations at the site in 1975. Two underground storage tanks were previously located between the Safety-Kleen building and a neighboring business. The USTs were apparently removed in 2007 under the oversight of Oakland Fire Department. During a preliminary site assessment in May 1986, total petroleum hydrocarbons as mineral spirits (TPHms) were detected in soil samples collected from three soil borings advanced to a depth of 20 feet bgs. Two of the borings were converted to 2-inch diameter monitoring wells. Separate-phase product was observed floating on the water table in both monitoring wells (SK-1 and SK-3). In June 1988, a soil gas survey was conducted to define the extent of contamination. Thirteen soil vapor samples were analyzed for TPHms. A TPHms vapor plume was identified in the parking lot and loading dock area and was inferred to extend beneath both adjacent buildings and the vacant lot to the north. Nine monitoring wells (MW-1 through MW-9) were installed on and around the site in July 1995. VOCs were detected in groundwater from each of the wells sampled. Because trichloroethene (TCE) was detected at elevated concentrations in the upgradient groundwater samples, it was assumed that a plume from an off-site source was migrating to the Safety Kleen site. Four additional monitoring wells were installed around the periphery of the VOC plume from August 18 through September 12, 1989. Monitoring well MW-13 was installed with a discrete screen interval in the lower portion of the uppermost aguifer to evaluate the vertical extent of contamination. Between May 31 and July 5, 1990, three single-walled USTs were removed and replaced with two 12,000-gallon USTs. Groundwater and product was encountered at a depth of approximately 8 feet bgs during the UST removal . Approximately 100 gallons of product and 34,000 gallons of water were removed and treated. TPHms was detected in eight soil samples collected during the UST removal. In conjunction with the UST installation, soil vapor extraction (SVE) piping and a product recovery well were installed in the excavation. A small waste oil tank located north of the Safety-Kleen facility was also removed on July 2, 1990. The SVE system began operation in June 1993. pilot test was conducted on January 18, 1990. From start-up through November 11, 1998, the SVE system removed approximately 5,400 pounds of TPHms. A product pumping system was installed in recovery well RW-1 to removed separate-phase product from the surface of the water table and began operation on January 19, 1993, Due to failure of the recovery pump, the recovery pump was replaced by a passive skimmer in November 1995. On August 5, 1998, the passive skimmer was removed and replaced by suspension of oxygen releasing compound in recovery well RW-1.The total volume of mineral spirits product removed was approximately 444 gallons. Safety-Kleen entered into a Corrective Action Consent Agreement with the Department of Toxic Substances Control (DTSC) on September 21, 2009, DTSC provided conditional approval of a Risk Assessment Work Plan in correspondence dated December 15, 2009 but is

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Registry ID: 110002334046

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110009329681

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites,

Facility Status:

Entered 8/27/04 - The Oakland Service Center is a service and operation center which leases and services Safety-Kleen parts cleaning equipment and solvents to Safety-Kleen customers. The service center also collects spent parts washer solvents,

aqueous-based solvents, dry cleaning wastes, spent silver-bearing waste and transfer wastes. Transfer wastes include industrial solvents, Freon, antifreeze, and paint waste/laquer thinners. The facility s hazardous waste storage permit expired in March, 1997. Safety-Kleen submitted a permit renewal application (Application) for the facility on February 14, 1997. Immediately after the completion of technical review of the revised Part B Application with three

Notices of Deficiencies (NODs), Safety-Kleen submitted supplements to the facility s permit renewal application to add three new waste streams (aqueous cleaners, used oil and used antifreeze) to be managed in the underground storage tank (UST) at the facility. The 12,000-gallon UST is currently only permitted for storage of spent parts washer solvent. The Fiscal Year 2004/2005 Annual Work Plan calls for completion of technical review of the Application,

preparation of draft permit, issuance of draft Neg Dec, public participation, and final permit determination. Update 6/29/07 - On April 17, 2006, SK notified DTSC that they intend to terminate their permitted activities and thus close the Oakland facility. The permitted units are: Tank Storage (one nominal 12,000-gallon double-walled underground storage tank used to store spent parts washer solvent), a Return/Fill Shelter (two drum washer units that hold a maximum of 1,500 gallons of sediment), and Container Storage (two container storage areas with a total waste storage capacity of 8,254 gallons). DTSC reviewed the closure plan of April 25, 1994 and determined that it was not up to current standards, and as a result, DTSC provided comments to SK on August 14, 2006. SK submitted a revised closure plan on September 21, 2006 by a Class 1 Permit Modification. The revised closure plan was deemed complete by DTSC on October 24, 2006. SK began closure activities in the week of March.

October 24, 2006. SK began closure activities in the week of March 11, 2007 by decontamination of the units by cleaning the units with a detergent-water solution and high pressure spray. Decontamination wastes were collected using a tanker truck. The UST was pulled on May 23, 2007 with Keith Matthews of the City of Oakland Fire Department (CUPA) present. DTSC staff met with Brian Culnan of SK on 6/5/07 at the DTSC Sacramento Regional Office to discuss corrective action and AB1651 at SK Oakland.

RB Case Number: 01-0487 LOC Case Number: RO0000016

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Gasoline

Site History: In November 1991, one 5,000-gallon gasoline UST, two 10,000-gallon

diesel USTs, one 750-gallon waste-oil UST, dispensers, and associated piping were removed from the site and replaced with two diesel USTs and one aboveground WOT. Elevated petroleum hydrocarbons were reported in soil collected from the excavation sidewalls. In June 1992, one 10,000-gallon diesel UST was removed. Groundwater contained 72,000 |g/L TPHd. Monitoring wells were installed in 1994. Free product was observed in MW-4 in the June 2002 monitoring event.

Free product bailing and adsorbent socks were deployed. Free product was reduced quickly. Groundwater monitoring discontinued

in 2003.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

EDR ID Number

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

AJ132 PG AND E OAKLAND SE 50 MARKET ST BTWN 1ST AND GROVE Manufactured Gas Plants 1008407726

N/A

1/2-1 OAKLAND, CA 94607

0.597 mi.

3152 ft. Site 2 of 2 in cluster AJ

Relative: Lower Manufactured Gas Plants:

Actual: 13 ft. The PG AND E Oakland Site is located near the Oakland Inner Harbor along Embarcadero West. The PG AND E Oakland Site is a portion of the former Oakland Manufactured Gas Plant (MGP) site. The Site includes two parcels: a portion of the former MGP at 550 Market Street; and the Station C Electric Generating Substation at 630 Embarcadero West. The MGP operated between 1905 and 1930. Wastes typically associated with MGP included tar residues, sludges, and spent oxides. The Station C property supporteed operations at the off-site historical

MGP site.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

EDR ID Number

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Background Info: The Gaines Site is a vacant lot located in a mixed residential/

commercial/industrial neighborhood. It has been used to store automobiles, drums, pressurized gas containers and other miscellaneous equipment. Surface samples collected found lead as high as 28,000 parts per million (ppm). No volatile or semivolatile organic compounds were detected at significant

levels.

Comments Date: 02092003

Comments: A Removal Action Workplan was approved in February 2003 which

Comments Date: 02092003

Comments: required the removal of all soil containing metals above

Comments Date: 02092003

Comments: residential standards.

Comments Date: 06271997

Comments: Site Screening prepared under the US EPA Grant indicates that

Comments Date: 06271997

Comments: further assessment of this Site is needed.

Comments Date: 08012002

Comments: DTSC issued an Imminent and Substantial Endangerment Order to

Comments Date: 08012002
Comments: property owner.
Comments Date: 08311998

Comments: DTSC concluded that further assessment was needed and recommended

Comments Date: 08311998

Comments: that a site inspection be conducted by the City of Oakland.

Comments Date: 09192003

Comments: In June and July 2003, DTSC's remediation contractor conducted a

Comments Date: 09192003

Comments: Removal Action which consisted of excavation, consolidation and

Comments Date: 09192003

Comments: offsite disposal of 485 cubic yards of lead-contaminated soil

Comments Date: 09192003

Comments: and debris to a Class I landfill. In September 2003, DTSC

Comments Date: 09192003

Comments: approved the Completion Report for the Removal Action. DTSC

Comments Date: 09192003

Comments: certified that the property has been cleaned to unrestricted

Comments Date: 09192003

Comments: residential standards.

CA BOND EXP. PLAN: Relative:

Lower Reponsible Party: RWQCB REFERRAL SITE Project Revenue Source Company: Not reported

Actual: Project Revenue Source Addr: Not reported 11 ft. Project Revenue Source City, St, Zip: Not reported

Project Revenue Source Desc: The responsible parties will pay all costs associated with remedial

investigations and cleanup activities under RWQCB oversight. There are no plans

to utilize Bond funds for this site.

Site Description: Southern Pacific, Oakland, is a large railyard, switching and maintenance

> facility located between the Outer Harbor and Inner Harbor of San Francisco Bay. The site includes two surface impoundments which are separated by approximately a one-half mile distance: an oil/water separator system for waste waters from the cleaning of rail cars and an inactive waste pond for wash waters from the interiors of tank cars (referred to as polychlorinated biphenyl (PCB) sludge pond). There is soil and groundwater contamination at each of the

surface impoundment areas.

Hazardous Waste Desc: This site has been contaminated by PCBs, polynuclear aromatics (PNAs), benzene,

toluene, xylene, ethylbenzene, waste oils, solvents such as trichloroethylene

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

SOUTHERN PACIFIC TRANSPORTATION CO. OAKLAND (Continued)

S100833473

(TCE) and dichloroethylene (DCE) and heavy metals such as lead and arsenic.

Shallow ground water is contaminated by solvents.

Threat To Public Health & Env: The waste impoundment area is fenced; however, direct contact would present a

potential health threat. This site is located within one mile of the San

Francisco Bay; a drainage ditch is underneath the site. Potential for migration of contaminants to the Bay is low. Solvents are known to have migrated offsite (at least 200 feet from the site at 3-foot depth) and to shallow ground water.

There are no known domestic wells within three miles of the site.

Southern Pacific submitted a draft RAP to the RWQCB and DHS in April, 1988. The Site Activity Status:

RWQCB has determined the RAP to be unacceptable and is requiring additional

hydrogeologic and site characterization.

Alternate Address: CYPRESS CORRIDOR Alternate City,St,Zip: OAKLAND, CA 94607

Background Info: Site has been used as a railyard for approximately 90 years.

Petroleum hydrocarbons and metals have been detected along the rail lines. An Imminent or Substantial Endangerment order was issued in June 1994 to Southern Pacific. In October 1997, the Remedial Investigation Report was approved. Investigations mainly detected high boiling petroleum hydrocarbons (JB oil, motor oil or oil and grease) in the soil (fill material). Other chemicals such as lead, volatile organic compounds, polycyclic aromatic hydrocarbons, and pesticides were detected in isolated area of the Site at low concentrations. Chemicals detected in the groundwater included cis-1.2-dichloroethene and

the groundwater included cis-1,2-dichloroetherie and

trichloroethene in isolated area.

Comments Date: 03201998

Comments: Approved RAW which required that a Deed Restriction be recorded

Alternate Address: 700 MURMANSK STREET, SUITE 3

Alternate City, St, Zip: OAKLAND, CA 94607

Background Info: ase wl

ase which wil be redeveloped by the City of Oakland with a variet y of commercial and industrial uses as part of the Gateway Develo pment Area. Also, close to 185 acres (plus roughly 56 acres of s ubmerged lands) will be developed by the Port of Oakland for mari time, rail and other port activities as part of the Port Developm ent Area. No residential uses will be allowed on the former Oakl and Army Base property under the Amended Reuse Plan. The Amended Reuse Plan, draft RAP, and draft RMP are analyzed in the former Oakland Army Base Area Redevelopment Environmental Impact Report pursuant to the California Environmental Quality Act. The Army h as been conducting site environmental investigations and selected remedial actions since 1989. DTSC is the primary agency oversee ing the investigation and cleanup of the former Oakland Army Base , and the Regional Water Qulaity Control Board, San Francisico Ba y Region regulates the removal and closure of petroleum fuel tank s. The Army's remedial activities have included removal of above ground petroleum storage tanks (ASTs) and underground petroleum s torage tanks (USTs), excavation of contaminated soil and removed petroleum hydrocarbons from monitoring wells at former tank locat ions, excavation of pesticide-containing soil from the off-site w etlands area, and replacement of many transformers and electrical equipment containing polychlorinated biphenyls (PCBs). On August 6, 2003, Governor Davis approved Early Transfer of the former Oakland Army Base to the City of Oakland. The U.S. Army r equested that the State of California approve the deferral of rem ediation of hazardous substance contamination and approve the tra

nsfer of the 363.5 acre base to the Oakland Base Reuse Author- it y and the City of Oakland acting by and through the Oakland Redev elopment Agency via an Economic Development Conveyance process. The City of Oakland will begin remediation of hazardous substance s in soil and groundwater as required in the Remedial Action Play (RAP). The early transfer advances economic development for Oak land and the region by integrating redevelopment with remediation . The RAP identifies preferred alternatives at seven sites which have been fully investigated and characterized for release of haz ardous substances and for which remediation would proceed upon fi nal approval of the RAP. The Risk Management Plan (RMP), which is an appendix to the RAP, addresses all other areas of known or po tential contamination, which may not yet have been fully investig ated or characterized. The RMP specifies health protective measur es that must be follwed during and after redevelopment at these I ocations. The RMP includes protocols for conducting inspections, performing routine sampling, maintaining institutional and engine ering controls, elevating RMP location to RAP sites as appropriat e, and fulfilling reporting obligations. The former Oakland Arm y Base comprises of approximately 425 acres. Much of the base pr operty was originally tidal flats or shallow open water. During the first half of 1900s, the area was filled to create the land s ubsequently acquired by the Army 1941. The former Oakland Army B ase served as a major Army cargo port and warehousing facility fr om 1941 until it was closed under the Base Realignment and Closur e program on September 30, 1999. Army activities supported the f ormer Oakland Army Base's primary military mission as a distribut ion center and included maintaining and fueling railroad locomoti ve engines and trucks that transported cargo, draining fluids fro m vehicles for overseas shipment, and repairing and servicing veh icles equipment, and base facilities. The Amended Draft final Reu se Plan for the Oakland Army Base, Dated July 23, 2001 (Amended R euse Plan), incoudes about 189 acres of the former Oakland Army B

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010 Date Data Arrived at EDR: 02/19/2010 Date Made Active in Reports: 05/17/2010 Number of Days to Update: 87 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 01/06/2011 Next Scheduled EDR Contact: 04/18/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010 Date Data Arrived at EDR: 02/19/2010 Date Made Active in Reports: 05/17/2010 Number of Days to Update: 87 Source: Environmental Protection Agency Telephone: (415) 495-8895 Last EDR Contact: 01/06/2011

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A

EDR Historical Cleaners: EDR Proprietary Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Telephone: N/A

Last EDR Contact: 12/16/2010

Next Scheduled EDR Contact: 04/04/2011 Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

USGS TOPOGRAPHIC MAP

Target Property Map: 37122-G3 OAKLAND WEST, CA

Most Recent Revision: 1980

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

Soil Drainage Class:

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

APPENDIX G ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

environmental management, inc.

DENNIS LADUZINSKY, P.G., C.E.G., R.E.A.

PRINCIPAL

Mr. Laduzinsky has more than 25 years of professional experience providing direct oversight and management of a wide variety of environmental and engineering projects. He has managed team efforts for remedial investigations, feasibility studies, environmental assessments, and evaluation of remedial alternatives and implementation of remedial measures. Mr. Laduzinsky's background includes extensive project experience in environmental evaluation for commercial and residential real estate development, and includes substantial expertise in basic engineering geology and hydrogeologic evaluation.

REPRESENTATIVE EXPERIENCE

Site Investigation and Remediation

- Confidential VOC Project, Mountain View, California—Performed detailed site characterization studies to evaluate the source and extent of VOC contamination in soil and groundwater at a bay-margin R&D business park. Identified RPs based on historic land use evaluation. Initial site characterization studies were used to negotiate a settlement agreement and obtain pollution legal liability insurance for the site. Continuing work consists of peer review and oversight of additional investigation and cleanup of VOC contamination by others on behalf of the property owner, including representing the property owner at regulatory meetings, presentations at the RWQCB, negotiations with RPs and other interested parties, discussions with insurance company representatives, and development of technical support strategies for subsequent legal actions to enforce the settlement agreement, when required.
- Confidential Dry Cleaners, Santa Rosa, California—Provided data compilation and evaluation services to develop plans for additional site characterization and cleanup at dry cleaner site involved in a co-mingled plume with two nearby gasoline service stations. Performed a detailed evaluation of historic site characterization data for the dry cleaner and adjacent service stations, produced by different consultants over a 15-year time frame and compiled the information into a single coherent document. Developed a scope of work to complete the site characterization studies, and evaluated alternative cleanup options for the dry cleaner, including soil vapor extraction, excavation and disposal, and chemical oxidation. Also provided evaluation of a planned regional groundwater cleanup program to address the co-mingled groundwater contamination plume. Negotiated work scopes and cleanup levels with the California RWQCB.
- Ontario Corporation Facility, San Carlos, California—Senior Manager for site characterization
 and remediation of VOCs at a bay-margin metal-products manufacturing facility. Project included
 characterization of VOC plumes in bay-margin setting, including evaluation of former shorelines
 and tidal channels. Developed a hydrogeologic model to evaluate fate and transport of VOCs in
 tidally influenced shallow water zones overlying deeper aquifers separated by low-permeability
 Bay Muds. Implemented a remediation program consisting of a horizontal vapor extraction
 system beneath the former chemical storage area slab. Site closed by state and local agencies.
- King's Court Shopping Center, Los Gatos, California—Project manager for site characterization
 and remediation at a former dry cleaning facility located in an up-scale strip-mall. Implemented
 complete soil and groundwater cleanup programs including soil vapor extraction, air-sparging,
 and groundwater extraction and treatment. Performed indoor air quality evaluations and
 developed engineering controls to manage air quality issues.
- El Granada Groundwater Investigation, San Mateo County, California—Project Hydrogeologist for basin-wide groundwater supply evaluation. Project performed for County of San Mateo

Environmental Health Department for land use and well-permit allotment planning. Project included evaluation of the occurrence and movement of groundwater, and distribution of water quality indicators. Project resulted in recommendations for three optional levels of groundwater management planning. Services included formal public presentations at County Board of Supervisors meetings, and representing the County in basin-management meetings with the Regional Water Quality Control Board.

- Alameda Marina Area, Alameda, California—Managed complete characterization and remediation of cyanide and heavy metal contaminated soil at the site of a former photochemical machine shop. Project involved coordination and negotiation of investigation scope and cleanup standards with County Health Department and the RWQCB. Project received agency sign-off following excavation of soil from beneath an existing building and presentation of evidence of no health risk.
- Port of Oakland Galbraith Dredged Material Disposal Facility Project, Oakland, California—
 Project Manager for air, surface water, and groundwater monitoring at the Galbraith Disposal
 Site. Responsible for ensuring compliance with the RWQCB NPDES permits for the site, where
 over 1 million cubic yards of sediment dredged from the Oakland Harbor were disposed and
 dried over a period of 7 years in containment lagoons constructed over a former landfill.

Brownfield Redevelopment

- Santana Row (former Town and Country Village), San Jose, California—Project Manager for implementing removal actions for managing pesticide- and metals-impacted soil during redevelopment of a 50-acre shopping center. Removal actions consisted of selective excavation, on-site encapsulation, and off-site disposal or reuse of over 250,000 cubic yards of pesticide-impacted soil, and off-site removal of more than 350,000 cubic yards of "clean" soil. The project required careful management of large volumes of soil during full-scale site grading operations, requiring significant coordination with contractors, regulatory agencies, and the general public. The project also included third-party oversight of the regulatory cleanup and closure of an automobile dealership performed by others. Effective project management and coordination allowed the project to proceed without any construction or development delays related to the removal actions or other issues related to the presence of contamination at the site. The project is listed on the "Brownfields Success Stories" section of the DTSC web site.
- Catalyst Project, Alameda, California—Provided complete environmental assessment and management for a downtown redevelopment program that included demolition of existing structures, constructing a new theater and multi-level parking garage, and renovation of a historic art-deco movie theater. The investigation included a complete assessment of the site history, characterization of soil and groundwater contamination, and evaluation of asbestos, lead-paint, and mold in the existing buildings. The Phase I investigation indicated that a portion of the site had been historically occupied by a gasoline service station with eleven underground storage tanks for which no removal records were found. A Phase II site characterization study delineated the vertical and lateral extent of residual contamination. A baseline risk assessment demonstrated that residual contamination would not significantly impact the proposed redevelopment. Environmental management services included preparation of cost estimates for possible site mitigation alternatives, development of contingency plans and bid document specifications for dealing with hydrocarbon-impacted soil and groundwater encountered during construction, and managing potentially contaminated groundwater produced during construction dewatering activities at the site.

- Livermore Senior Housing, Livermore, California—Performed comprehensive Phase I and II site characterization studies and remedial actions on a 10-acre redevelopment site containing several abandoned railroad easements. Remedial actions performed under a Voluntary Cleanup Agreement with DTSC consisted of the on-site encapsulation of about 5,000 cubic yards of arsenic-impacted soil associated with one of the railroad embankments. Northgate currently provides annual operation and maintenance inspections in accordance with a land use restriction recorded at the site. The project is listed on the "Brownfields Success Stories" section of the DTSC web site.
- Garin Vista Housing Development, Hayward, California—Performed site characterization studies
 and subsequent air monitoring services for massive hillside grading program in an area underlain
 by naturally occurring asbestos. Developed and implemented an asbestos air monitoring plan
 and n asbestos dust mitigation plan in accordance with the California Air Resources Board
 Asbestos Toxic Control Measure for grading in areas underlain by naturally occurring asbestos.

Environmental Due Diligence

- Duc Housing Partners, Federal Realty Investment Trust, Palo Alto Medical Foundation, Edenbridge, Standard Pacific Homes, Cousins Properties, Brooks Street, Brookfield Homes, Davidon Homes, Delco Builders, Watson Land Company, and Other Residential and Commercial Developers, Northern and Southern California—Performed and managed Phase I and Phase II assessments at over 100 sites throughout California for residential and commercial developers. Sites variously included former industrial properties, chemical manufacturers, food processing facilities, railroad yards, downtown redevelopment projects, strip malls, shopping centers, dry cleaners, schools, corporation yards, agricultural lands, cattle ranches, diary farms, in-filled quarries, oil and gas fields, and other sites. Projects commonly included follow up site characterization studies for evaluation of potential indoor air quality impacts, evaluation of remedial alternatives, preparation of preliminary remediation costs and schedules. Contaminants of concern commonly included pesticides, petroleum hydrocarbons, metals, polynuclear aromatic hydrocarbons, volatile organic compounds, PCBs, asbestos, lead paint, mold, and other contamination issues.
- 301 Industrial Way, San Carlos, California—Performed a comprehensive due diligence review for the proposed purchase of an 18-acre industrial facility used to manufacture vacuum tubes for over 50 years. Performed comprehensive review of historic environmental reports, detailed analysis of environmental documents and remedial action plans prepared by the seller, and performed an independent evaluation of existing site conditions and estimated site cleanup costs. Assisted the prospective purchaser in negotiating the sales agreement terms and conditions, liability transfer issues, and cleanup cost set-asides. When negotiations ultimately reached an impasse, other Northgate resources were enrolled to provide the client with a turnkey real estate transfer solution that included assumption of the site cleanup responsibilities and environmental insurance policies to manage liabilities.
- Santa Clara Valley Water District—Program manager for a multi-year environmental service
 contract that includes Phase I and II environmental site assessments for a variety of land
 transactions performed by the District, including leases, transfers, purchases and sales.
 Services include specific assessment of potential risk and liability associated with each
 transaction.
- City of Oakland and City of San Francisco Public Works Agencies—Served as Project Manager for Phase I and Phase II environmental assessments and other due diligence evaluation services on multi-year as-needed master service contracts. Services included evaluation and cleanup at

the former Oakland Army Base, downtown redevelopment projects, tenant audit programs for hazardous materials management on city-owned properties, and storm water management and control programs.

- Palo Alto Airport and City Refuse System Maintenance Yard—Program manager for Phase I and Phase II ESAs on city-owned parcels, performed to assist the city in renegotiating leases for independent facility operators.
- Facility Closure Review, San Francisco Bay Area, California—Performed third-party oversight of
 facility closure programs on behalf of commercial property owners at a number of sites
 throughout the San Francisco Bay Area. Facilities include medical research facilities, light and
 heavy manufacturing facilities, medical offices, automotive repair facilities, automobile
 dealerships, and other sites. Worked to ensure compliance with local regulations and to evaluate
 potential soil and groundwater contamination and building contamination issues overlooked by
 local regulatory inspectors.

Litigation Support

 Served as expert witness for two hydrocarbon contamination cases. Provided depositions and attended non-binding arbitration settlements. Both cases successfully resolved prior to court. Provided technical evaluation and consultation for several VOC and petroleum hydrocarbon contamination cases. Represented client in binding arbitration for cost recovery for facility closure and site cleanup at an automobile dealership.

EDUCATION

M.A., Geology, University of California, Santa Barbara, 1990 B.S., Earth Science, Northeastern Illinois University, 1975

PROFESSIONAL HISTORY

Northgate Environmental Management, Inc., Principal, 2002–present Henshaw Associates, Inc., Senior Project Manager, 1997–2002 Harza Engineering Company, Senior Engineering Geologist, 1989–1997 Kleinfelder, Inc., Project Geologist, 1986–1989 Pacific Materials Laboratory, Staff Geologist, 1976–1981

REGISTRATIONS

Professional Geologist: CA No. 4910

Certified Engineering Geologist: CA No. 1535 Registered Environmental Assessor: CA No. 03845
